Dear Friends and Fellow Gardeners:

On this page last year I said:

"In America the food shortage is just beginning to be felt, but in other countries people are starving. We must send even larger quantities of food to our Allies and to our own men in the Armed Forces."

That statement is even truer today than it was a year ago.

In many parts of the United States, 1943 was a poor growing year. A late spring followed by a dry summer caused a shortage in some farm crops and in several varieties of vegetable seeds.

I am glad to report to you, however, that again we have increased the production of vegetable seeds in general. Because of weather conditions, which are beyond our control, some varieties are unobtainable this year; others are so scarce that we can offer them in packets only.

If, when we are sold out of a variety you order, you will allow us to send you another variety equally as good, then we believe we can take care of all your seed requirements.

But it would be wise for you to order early.

So many of our men are in the Armed Forces, and the labor shortage is so great, that I regret to say we cannot give the quick service that our customers have been accustomed to in peacetimes.

Please order early and be patient with us if we are a few days late in filling your orders.

I assure you that we will do everything we can to give you good service and to supply you with the highest quality seeds that grow.

Faithfully yours,

President

BURPEE'S SEEDS GROW AND ARE THE BEST THAT GROW

Burpee's FORDHOOK FARMS

Fordhook is the best known seed farm in the world. It was founded before the United States Government had any experiment stations. Here all varieties of vegetables and flowers are tested. Some of our favorite vegetables carry the name Fordhook; for instance, Fordhook Bush Lima Bean. Our friends and fellow gardeners are always welcome at Fordhook and Floradale.

Burpee's FLORADALE FARMS

Floradale is the original seed farm of the entire Lompoc Valley of California in Santa Barbara County. For many years Floradale has been famous for the fine quality of flower seeds it produces. But since before Pearl Harbor it has also been producing the finest quality of many kinds of vegetable seeds that formerly came from Europe.

Burpee's vegetables are grown where soil and climate combine to produce the highest quality seeds. Tests are made at Floradale, as well as Fordhook, for purity, germination, and adaptability.

New and Better Vegetables

Great Lakes
Lettuce

532 Lettuce, Great Lakes

All-America Bronze Medal Winner for 1944

90 days. An outstanding all 'round crisphead or Iceberg type lettuce for all sections and all seasons. Especially valuable as a summer lettuce as it stands the heat and sun and is remarkably slow to throw seed stalks. Heads are small, flattened and oblong to triangular in shape. The leaves fold completely over the heads, which are solid even before they attain full size. Foliage is veined and a distinctive dark green. Average weight of heads, $\frac{7}{8}$ lb.; quality and texture are very good.

Pkt. 25¢; 4 pkts. \$1.00

(Not more than 4 pkts. to a customer.)

47 Burpee's Tender Pod Bush Bean

All-America Bronze Medal Winner

48 days. Pods grow $4\frac{1}{2}$ to 5 in. long, thick, round in cross section, smooth, deep dark green, curving slightly, with long and distinctively curved tips. They are entirely stringless, fleshy, brittle and of unsurpassed flavor, unequalled for table use and canning. Matures early and is most productive over a long season. In appearance, tenderness and quality it is unsurpassed. Tender Pod Bush Bean has quality that will be appreciated by every home gardener. Seed crop is short. Pkt. 15¢.

847 Burpee's Early Pimento Pepper

All-America Bronze Medal Winner

65 days. Peppers are heart-shaped, pendent, and when mature are $3\frac{1}{2}$ in. long and $2\frac{1}{2}$ in. in diameter at the top, smooth, dark green, turning bright red when ripe. The flesh is $\frac{1}{4}$ to $\frac{3}{8}$ in. thick—a heavy walled pepper which is mild at all stages, and is especially sweet after it has turned red. Pkt. 15¢; $\frac{1}{2}$ oz. 60¢; oz. \$1.00.

362 Pop Corn, White Jumbo

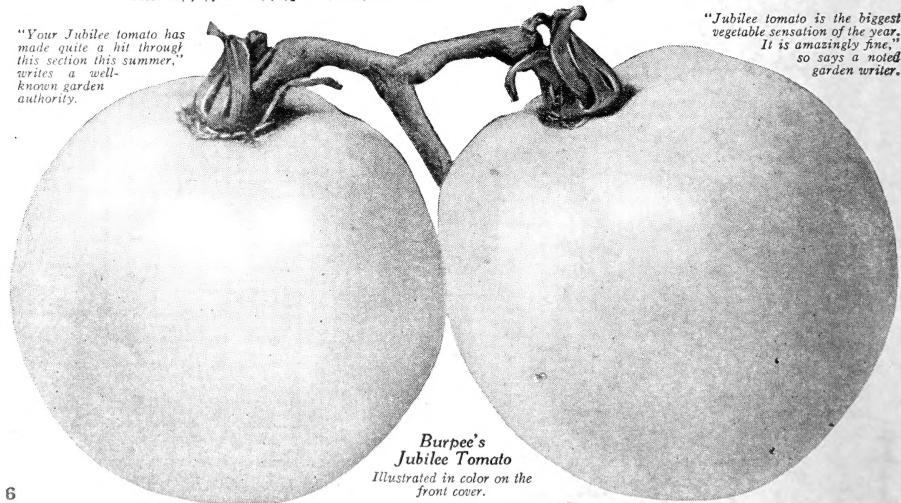

125 days. A white counterpart of South American Mushroom. Plants $6\frac{1}{2}$ to $7\frac{1}{2}$ ft. tall, bearing ears about 3 ft. from the ground. Ears grow from 7 to $8\frac{1}{2}$ in. long; grains are large and creamy white. Good for southern gardens or wherever late maturing varieties can be successfully grown. Pkt. 15¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢.

1111 Burpee's Jubilee Tomato

All-America Bronze Medal Winner

72 days. A new orange-yellow tomato which compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Entirely different from any yellow or orange tomato you ever grew. Fruits are bright golden orange, gloular, average weight, 6 ozs.; the orange colored interior is modern, thick-walled, with few seeds. The flavor is somewhat mild but not flat. Makes delicious juice of unusual and attractive color. Very high in Vitamins A and C. Three times as much Vitamin A as oranges. Pkt. 15¢; $\frac{1}{4}$ oz. 60¢; $\frac{1}{2}$ oz. \$1.00; oz. \$1.85.

"Your Jubilee tomato has made quite a hit through this section this summer," writes a well-known garden authority.

9989 Rhubarb

Chipman's Canada Red

Chipman's Canada Red is the best of the new rhubarbs so far introduced. It is a seedless type which makes it ever bearing. The plant is very vigorous and hardy, with long, slender stalks that are a bright red all the way through, the red color even extending to the mid-rib of the leaf.

It is also claimed to be sweeter than other rhubarbs. It makes a sauce that is more beautiful and delicious. Grow some of this unusual rhubarb in your own garden and enjoy its good merits.

1 root for \$1.50; 3 for \$4.00.

"Jubilee tomato is the biggest vegetable sensation of the year. It is amazingly fine," so says a noted garden writer.

What the outstanding authorities think of Burpee's new vegetable—Tampala

Fully described and offered on the next page.

After growing Tampala at both our Fordhook and Floradale Farms, we were sure it would be welcomed as a new green leafy vegetable but wanted to know what others thought of it. Samples of Tampala were sent to some of the country's leading horticulturists, garden editors, food experts and radio commentators and here are extracts from some of their letters:

BETTER HOMES AND GARDENS TASTING TEST KITCHEN, Des Moines, Iowa.
Tampala rating, very good; flavor, very good, resembles spinach but more mild; color, excellent, green; texture, similar to spinach but more tender—not the gritty feel that some spinach has. Tampala leaves cooked to just right tenderness in 5 minutes. Tampala stems, cooked separately, required an 8-minute cooking period, were pleasingly mild in flavor, tender, yet crisp in texture.

T. A. WESTON, Associate Editor, The Florists Exchange, New York.
Tampala is the best new vegetable in many a year. A short row trial in my home garden has convinced us that spinach can be eliminated, except perhaps as an early crop.

Tampala is even better than spinach as it is never gritty; leaves need only five minutes cooking in a little water; it has not the strong, and, by many, disliked flavor of spinach; it cooks a rich, dark green and, above all, it can be drained or squeezed dry, thus being more attractive looking. A ten-foot row of Tampala sown the latter end of May has given us many pickings and the plants still are going strong (Aug. 22, 1943). My wife and I think highly of it. Friends to whom we have given Tampala say it is superior to spinach at its best.

E. I. FARRINGTON, Editor, Horticulture, Boston, Mass.
Tampala is a real cut-and-come-again green—a grand all summer vegetable cooked like spinach, it is less watery and very dark green in color. To my way of thinking, it is far nicer than the true spinach or, for that matter, New Zealand Spinach or even Swiss Chard. Tampala received the approval of the entire family.

PAUL F. FRESE, Editor, The Flower Grower, New York.
Tampala, this is a new vegetable, certainly cooks down to the smoothest textured green that I have ever eaten. My family all like the mild flavor, too.

RALPH BAILEY, Managing Editor, House Beautiful, New York.
My feeling is that you have really got something in this new vegetable. Tampala grows rather better and more hardily than New Zealand Spinach and, in my way of thinking, has a better flavor. There is a hint of sorrel about it which carries me back to my childhood days and, incidentally, leads me to regard it highly as a zipper-upper for green salads.

RICHARDSON WRIGHT, Editor-in-Chief, House & Garden, N. Y.
We found Tampala more delicate than New Zealand Spinach, more easily prepared than the average Swiss Chard, and certainly way ahead of mustard greens. It is a plant of subtle flavors that delighted our palates. Thank you for letting me try it.

ANDREW S. WING, National Victory Garden Institute, New York.
I think you have one of the outstanding novelties of the year, especially considering the heat and dry weather we have had. Tampala not only grew well in my garden but met with the approval of the Wing family who, I might explain, are extremely fussy about their "greens." The unanimous report was that Tampala is a new and decidedly interesting vegetable with a better taste than spinach.

WAL K. JAMES, Philadelphia-Weeks Co., Philadelphia.
Without a doubt, Tampala is the best tasting green I have ever eaten. We are particularly fond of spinach, but we enjoyed Tampala more both for flavor and texture. Really, it was delicious.

E. S. BAYARD, Editor-in-Chief, Pennsylvania Farmer, Pittsburgh.
Tampala arrived in good condition and kept in good condition until used. All of us liked it very much; it is superior to spinach.

KIRK FOX, Editor, Successful Farming, Des Moines, Iowa.
The Tampala seed sent me last spring has grown well and produced heavily in our back lot garden, in soil of medium fertility, and was the mildest, most tasty spinach I have ever eaten.

F. D. NICHOL, Editor, Life & Health, Washington, D. C.
I started in on the Tampala with some terrific prejudices, because of its close family relationship to spinach, but I confess I like it. I made my way through a very generous serving of it. It has a much more tasty flavor than spinach, and doesn't seem to kind of dissolve into a hopeless pulp quite so easily as does spinach. I really think you have something in Tampala.

DOROTHY KIRK, Foods Editor, Woman's Home Companion, N. Y.
It has been very interesting to work with your new vegetable, Tampala. We are especially glad that Burpee has developed a new green leafy vegetable because of the important place this group holds in the nutritional program. The greens were cooked for 5 minutes and had an excellent flavor with a very slight, but pleasant, bitter taste. We consider them a very good change from the usual bland spinach flavor. The stems, cooked separately, proved a grand taste surprise; they were tender—without the least bit of stringiness and delightful in flavor. Please pass on to Mr. Burpee our congratulations and tell him how much we like his new vegetable.

David Burpee picking branches of Tampala at Fordhook Farms

DOROTHY H. JENKINS, Garden-Editor, The New York Times
We have given Tampala a thorough trial at home and I am glad to report that we do like it. I should call it an excellent green, enough different from spinach in texture and flavor so that it offers variety for the table. The lack of sand and grit to the leaves is certainly an added boon for the housewife.

E. C. VICK, Horticultural Editor, New York Journal American
The box of Tampala received and used for dinner last night. It was approved and enjoyed by the whole family. It certainly is an excellent green leafy vegetable.

MARY C. SECKMAN, Garden Writer, Clarksburg, West Va.
Tampala seed received and planted May 27th; ready for canning August 3th. Good flavor, shrinks very little when cooked or canned. Its most remarkable feature is that it should stay green after processing it in a steam pressure cooker for 95 minutes at 10 lbs. pressure. This fresh green color gives Tampala so much more appetizing appearance than either chard or spinach. Canned product kept color better than Swiss Chard or New Zealand Spinach canned in the same lot.

MARTHA PRATT HAINSLIP, Garden Writer, Shinnston, West Va.
Upon opening the box of Tampala which was delayed in reaching me, I found it only slightly wilted and immediately put it in a cool, damp cellar house over night. In the morning the Tampala was as fresh and crisp as if it had been recently picked. So you can see that this new vegetable is a good shipper and keeper—a desirable characteristic. I cooked the leaves and stems as suggested. They are delicious. My husband, who loathes any "spinach" sort of vegetable, admitted that this was really worth eating and growing. The flavor, we found, is more delicate than spinach.

ADELAINE HAWLEY, "Woman's Page"—"News of the Day"—N.Y.
Thank you for the foretaste of Tampala. It's always fun to sample a new food—especially when it carries the flavor of future fame, as this one obviously does. I like Tampala. It seems to have all the virtues of spinach, plus a pleasanter taste and greater versatility.

ELEANOR HANSON, WHK & WCLE, Cleveland, Ohio.
Tampala was cooked according to your instructions, and it is delicious! We've always been quite fond of spinach but Tampala has more zip and personality by far. Even its color is more appetizing. Again, thank you for a real treat.

EVELYN GARDNER, Director KDKA Home Forum, Pittsburgh.
I like the flavor of Tampala. It made a very tasty dish. In fact, I like it much better than spinach as spinach always has a bitter flavor I do not care for. Cooked in various ways and with proper seasoning, I see no reason why this new vegetable should not meet with the homemaker's enthusiastic approval.

MRS. PAGE, Home Adviser WJR, Detroit, Michigan.
I cooked the Tampala, as spinach, and enjoyed it very much indeed. Liked it more than spinach, due to the slightly rougher texture and a better flavor. If given a choice, I would always buy it in preference to spinach.

Burpee's TAMPALA

1375 Burpee's Tampala (*Täm-päl'-a*) is a delicious green vegetable, the leaves of which are cooked, prepared and served like spinach but is better than spinach in many important respects.

Tampala is so different in flavor to other vegetables used as "greens" that it is difficult to compare it to any of them. It retains its tenderness for a longer time, has a consistency and flavor all its own, less irony and less pucker than spinach, more flavor, more body, and more food value than either spinach or chard—a pleasing change from all other "greens." It does well in hot weather and will keep on producing all summer.

Tampala leaves are so tender that they require only five minutes to cook, with only the water that clings to the leaves when washed. Branches 4 to 5 in. in length may be quickly gathered instead of picking individual leaves. These young stem tips and leaves may be cooked together; the larger stems, up to the size of one's little finger, may be separated from the leaves and cooked separately for 8 or 10 minutes as you would cook asparagus. The stems have a taste suggestive of artichokes. Young leaves, cut finely, make a refreshing salad. There are many ways to use Tampala; below are four recipes we think you will like.

Tempting Ways to Use Burpee's Tampala

CHEESE TAMPALA SOUFFLE

1 tsp. chopped onion	½ cup milk	¼ cup grated cheese
2 tbsp. fat	¾ tsp. salt	3 eggs, separated
2 tbsp. flour	¼ tsp. pepper	1 cup chopped, cooked Tampala

Sauté onion in fat until slightly yellow. Stir in flour and gradually add milk. Cook, stirring constantly, until thickened. Add cheese and seasonings. Place over hot water in double boiler; stir until cheese melts. Beat the egg yolks thoroughly and add with Tampala to cheese sauce, then fold in stiffly beaten egg whites. Turn the souffle into a greased casserole and set in a pan of hot water. Bake in a moderate oven, 350° F., for about 50 minutes. Makes 4 servings.

TAMPALA WITH HOT BACON DRESSING

6 strips bacon	1 tsp. salt	1 tbsp. lemon juice
½ cup sugar	½ cup water	4 tbsp. bacon fat
2 tbsp. flour	¼ cup vinegar	

Fry bacon until crisp, drain fat and measure ¼ cup. Mix dry ingredients, add to liquids and bacon fat. Cook in top of double boiler seven minutes until smooth. Add half of crisp bacon to dressing.

Put fresh cleaned, cut Tampala (about one pound) into large kettle and toss lightly with hot bacon dressing over fire four or five times. Serve at once, using rest of bacon as a garnish.

Tampala has an unusually long period of usefulness; it will not bolt or go to seed during hot weather. One sowing usually produces enough "greens" for the season. However, for a continuous supply of the most tender leaves, several successive sowings may be made 10 days or 2 weeks apart. Entire plants when they become 5 or 6 in. high make the most delicious greens, raw or cooked.

Tampala is easy to grow. Sow seed outdoors the same time you plant beans, or any time after the ground becomes warm. Tampala is ready to eat in from six to eight weeks after sowing the seed. Where plants are grown singly, 2 ft. apart, they make a large, round plant 1½ ft. and more across and 2 ft. high; use the 4 or 5 inch tips of each branch and repeated cuttings may be made as new leaves and stems grow.

1375 Burpee's Tampala—Pkt. 15¢; 2 pkts. 25¢; ½ oz. 60¢; ¼ oz. \$1.00; oz. \$3.50.

TAMPALA RING

4 cups cooked Tampala	4 tbsp. butter or bacon drippings
¾ tsp. salt	3 cups cooked carrots and celery

Drain Tampala thoroughly. Chop fine and season with butter and salt. Press firmly into greased ring mold and place in slow oven, 250° F., for 20 minutes. Unmold ring onto chop plate. Fill center with buttered vegetables; garnish with bacon curls and mushrooms. Creamed chicken, meat or eggs may be used in place of the vegetables if desired.

Recipes developed and tested by Miss Alvina Iverson,
Director, The Country Gentleman Kitchen.

TAMPALA SALAD

Select tender leaves from Tampala stalk and wash thoroughly. Roll into firm bunch and cut with a sharp knife into very thin shreds. Also cut two medium sized onions into thin rings. Toss onions and Tampala together lightly with French dressing, also salt and pepper. Garnish with onion rings or sieved egg yolk.

Tampala leaves or shredded Tampala, both make nice underliners for molded or tart salads. Tampala won great favor in our kitchen.

Recipes developed and tested by Miss Miriam Williams,
Associate Editor, Farm Journal and Farmer's Wife.

Tampala is not a new creation, but a newly recognized vegetable here. It has been enjoyed by the Chinese and the people of India for centuries.

Several years ago Rev. Earnest L. Lutz, a retired missionary, brought seed of this vegetable with him from Chungking, China, and gave some to David Burpee so that he might produce it in such quantities as to supply gardeners everywhere.

In China, the plant is known by several names, but these names are difficult to pronounce and not suitable for use in English or Spanish speaking countries. Therefore we have chosen the name "Tampala," by which it is known in India. Tampala is a horticultural variety of *Amaranthus gangeticus* L. We feel sure you will like it wherever you live.

ASPARAGUS—Seed and Roots

Asparagus roots are ready for spring delivery during March, April and early May. No orders for Asparagus roots can be accepted after May 1.

Seed should be sown as early in the spring as ground can be worked. When the roots are 1 or 2 years old, transplant them to their permanent location, spacing them 15 to 18 in. apart in rows 2½ ft. or more apart. One pkt. of seed will produce about 100 roots; one ounce about 750 roots.

Cultural directions are sent with every order of asparagus roots; instructions for sowing the seed are printed on the package. As asparagus is perennial, it should be grown at one end of the garden.

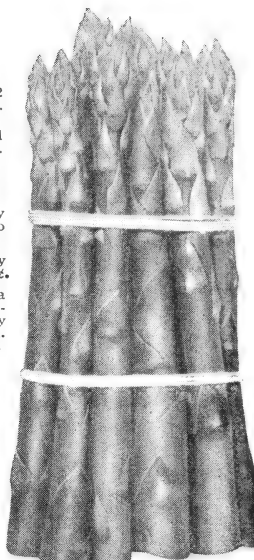

9 Mary Washington—Our most valuable green asparagus

The shoots are thick and heavy, long and straight, rich dark green lightly tinted purple, with very compact tips that are slow to branch or "blow." Heavy yielder and fine flavor. Highly resistant to asparagus rust. Mary Washington is undoubtedly the best green asparagus for home or market.

Seed Seed sown this spring will give a light cutting of stalks in three years and regular cuttings may be made each year thereafter. *Seed crop is rather short.* Pkt. 10¢; oz. 20¢; ¼ lb. 50¢.

9950 Roots (1-Year-Old) Strong, carefully graded roots which, if planted this spring, saves a year over raising your own plants from seed. Some cutting may be done next spring but your asparagus bed will be benefited if cutting is delayed until the second year. Roots may be planted as early in the spring as the ground can be worked. 25 for \$1.00; 50 for \$1.75; 100 for \$3.00, prepaid. *Not prepaid, 250 or more @ \$17.00 per 1000; 2000 or more @ \$16.00 per 1000.*

9951 Roots (2-Year-Old) For the quickest returns, plant these large roots. They will give a light cutting during the coming season and can be cut in the regular way each year thereafter. May be harvested from early spring until midsummer. 25 for \$1.15; 50 for \$1.90; 100 for \$3.25, prepaid. *Not prepaid, 250 or more @ \$18.00 per 1000; 2000 or more @ \$17.00 per 1000.*

FOLLOW THE BULL'S EYE

We have used this mark  for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark , usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class**. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions in many different localities.

BROCCOLI

Same cultural directions as for cabbage will also apply for broccoli. One pkt. produces about 250 plants; oz., 3000; use ¼ lb. for an acre.

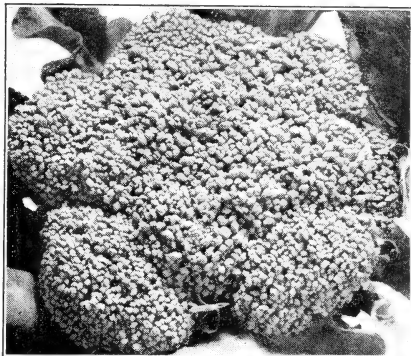

Italian Green Sprouting

Resembles cauliflower except in color. One large head is produced on the main stalk, and, after being cut, numerous smaller heads appear over a long period. A sowing made in early spring will furnish heads in summer, while seeds sown in midsummer will provide for a fall crop.

157 Calabrese 85 days. The standard variety of sprouting broccoli for home garden, market, and recently in large quantities for freezing. Plants are tall, erect and vigorous, reaching 2½ or 3 ft. in height under good conditions, with the central large, green, cauliflower-like head 5 or 6 in. in diameter. Delicious flavor when cooked. Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

155 St. Valentine 150 days. Large white heads which look like cauliflower; harder and takes longer to mature. Recommended where cauliflower is difficult to grow. Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

154 Rapa Also known as **Perennial Turnip**. Produces many small green heads which are cut while green with about 6 in. of stalk. One of the first vegetables to mature in the spring if seed is sown in late summer or early fall of the previous year. Tops and flower shoots are superior in flavor to turnip "greens." Pkt. 10¢; oz. 20¢; ¼ lb. 60¢.

Calabrese Sprouting Broccoli

BRUSSELS SPROUTS

Best results are usually had by sowing the seed thinly in a specially prepared seed-bed or coldframe before midsummer allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor, which is more delicate than cabbage. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the stalk. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. One pkt. will sow 75 ft. of row; an oz. 500 ft.

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market, where it always brings a good price. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1½ to 1½ in. in diameter, freely produced from bottom to top of the stem. *Seed crop is short.* Pkt. 10¢; ½ oz. 30¢.

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season, locality and time of sowing.

STRINGLESS GREEN-POD BUSH BEANS

10 Burpee's Stringless Green-Pod

Has the Most Delicious Flavor of all Green-Podded Beans

49 days. The attractive green pods are about 6 in. long, slightly curved, so thick, even when quite young, as to be double-barreled, and, when fully grown, the pods are meaty and juicy, entirely stringless. Always tender, brittle, and of the finest flavor. The plants are medium large, spreading, with dark green foliage; they are of strictly bush form, enormously productive and have yielded remarkably well under adverse conditions. Seeds are a dark coffee-brown color.

Burpee's Stringless Green-Pod has long been considered the standard of quality for all beans, regardless of type. Its quality and tenderness have never been duplicated. A favorite for home use as well as for canning and commercial planting. When introduced in 1896, it was the only stringless green-pod bush bean in existence. A great bean with a long and respected history, parent of many varieties and still unsurpassed for quality, regardless of what others may claim. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

22 Burpee's Fordhook Favorite—White seeded

52 days. Pods 5½ in. long, round, meaty, medium green, perfectly stringless and fiberless, extremely brittle and juicy. Quality is excellent. Seeds are pure white, and if allowed to ripen are useful for soup or baked beans during the winter. Plants are of stocky growth and very productive. A favorite two-purpose bush bean which we can highly recommend.

The seed crop is very short this year. Pkt. 15¢; ½ lb. 30¢.

27 Tendergreen—Very long, round, tender pods

53 days. Extremely meaty, smooth, dark green, round, tender pods, 6 to 7 in. long, straight to slightly curved and of the most delicious flavor. Absolutely stringless at all stages of growth and always free from fiber. Pods mature early and are borne profusely for a long time. Wonderful for home and market; ideal for canning and shipping. Each year sees the use of Tendergreen on the increase and with good reason—pods are very long, plump, smooth, with excellent color and quality; a bean you should grow. We are sure you will like it.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

51 days. The pods are flat, thick, straight to very slightly curved, medium green, 6 to 7 in. long, fairly smooth, stringless and of good quality. The plants are most prolific, and make a strong growth even when conditions are not favorable for best results. Growers of shipping beans should certainly give Plentiful a trial as well as home and market gardeners wanting an early, flat green-pod bean. Black seeded. *All-America Bronze Medal Winner.*

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

How to Grow Bush Beans

Green and Yellow Podded Bush Beans (originally called string beans) succeed in almost any good garden soil but do best in a warm, well-drained, sandy loam. Plant seed when all danger of frost is past and the soil is quite warm, in rows 18 to 30 in. apart for hand cultivation or 2½ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make repeated sowings every 2 weeks, allowing plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall. One pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

23 Giant Stringless Green-Pod ⊙

51 days. The medium-green pods grow 6 to 6½ in. long; meaty, round, slim, slightly curved, brittle, and absolutely stringless. Seeds are a light brown color. The plants are of strong growth, compact, and bear a heavy crop of pods for a long time. Fulfills the same purpose as Burpee's Stringless Green-Pod in the home garden, market garden and cannery. Pods are, however, not as thick, and lighter green in color. Their appearance in market is unusually attractive. Productive and adapted to the entire United States. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

47 Burpee's Tender Pod ⊙

48 days. Burpee's Tender Pod Bean surpasses all others in quality, tenderness, succulence, and flavor from the time the pods first reach edible size until the seed is well developed. The pods are 4½ to 5 in. long, thick, round in cross section, smooth, deep dark green in color, curving slightly, with long and distinctively curved tips. Pods are stringless, very fleshy, brittle, and succulent—the most tender podded bush bean. The seed is pearly white, with a small red spot on either side of the eye, so that it is also suitable for use as a dried shell bean. Tender Pod Bush Bean is of the greatest value to the home garden, where its superior table quality can best be appreciated. For canning, it has no equal; matures early and is very productive.

The seed crop is very short; can offer packets only. Pkt. 15¢.

STRINGLESS YELLOW-POD BUSH BEANS

Wax or Yellow-Podded Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home garden. The planting information given for Bush Beans on page 10 applies to the Wax-Pod and Green-Pods alike. The bushes range in height from 12 to 20 in. Most gardeners arrange to have plantings of both the green and wax-pod beans made so as to have the two always on hand; this makes for a nice change when serving at the table.

44 Burpee's Kidney Wax

52 days. This Burpee introduction is pronounced by many the most tasty of all beans. Pods are almost straight, broad, yet quite thick, meaty, and entirely stringless at all stages of growth; 6 in. long, $\frac{1}{2}$ in. broad, $\frac{1}{8}$ in. thick, and of a bright lemon-yellow, reflecting their tenderness and delicate flavor. Prized for canning. The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color, and their absolute freedom from strings; plants are noted for their great prolificness. They are strong growers, forming upright bushes, 18 to 20 in. in height. Seeds are kidney-shaped, pearly white with a small brownish black eye.

Seed crop is very short; can offer pkts. only. Pkt. 15¢.

41 Rustproof Golden Wax TOP NOTCH STRAIN

50 days. Extra early in maturing. The straight, golden yellow pods are broad and flat, 5 to $5\frac{1}{2}$ in. long, stringless, brittle, and of good quality. Proliferous bearer. Especially suitable for the home garden or early market. The plants grow more compactly and more erect than the old Golden Wax, bearing the pods well off the ground. Other features are that it reaches the peak of its season very quickly and is almost totally resistant to bean rust, which, in wet seasons, renders some varieties of wax beans unsightly or unmarketable. The pods develop a full yellow color when very young thus presenting a beautiful appearance when served or put up in jars for winter use. Seeds are white, marked brown around eye.

Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

48 Pencil-Pod Black Wax

52 days. One of the most popular bush wax beans. Beautiful, rich yellow, deeply curved round pods, $5\frac{1}{2}$ to 6 in. long; always stringless, tender, brittle; fleshy, and of excellent quality. Ripe seeds are jet-black. Beans early and profusely throughout a long season; this good feature, combined with quality, flavor and attractive appearance, makes Pencil-Pod most desirable for home and market garden, as well as for canning. Pods are as round as a pencil, thick and meaty, with a wonderful flavor and tenderness that is most pronounced. Does well under a wide range of conditions.
Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

33 Burpee's Brittle Wax

52 days. A superior quality Burpee yellow-pod bean. Plants are of medium size, erect, leafy, and very productive. Pods grow $5\frac{1}{2}$ to 6 $\frac{1}{2}$ in. in length; are clear, light waxy yellow in color, round, slightly curved, and smooth. There is no trace of string or fiber at any stage of growth. Flesh is tender, brittle, and of the finest flavor. An established favorite where beans are grown.

The kidney-shaped seed is pure white, with irregular black markings around the eye. The many desirable features of Brittle Wax, which include wide adaptability to climatic conditions, attractive appearance of both pods and plants, and exceptional quality, have made it the most widely planted of all wax-podded bush beans. Equally desirable for home uses, for market and for canners.

Seed crop is very short; can offer pkts. only. Pkt. 15¢.

BURPEE'S POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should not be planted until all danger of frost is past and the soil is warm and moderately dry. They mature in from 64 to 80 days, depending on variety, and do best if the vines are given support, the most frequently used being rough poles, 7 ft. or more tall, sunk in the ground 1½ to 2 ft. deep, and 3 to 4 ft. apart. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

These strings do not impair the quality of the pods so that they can be eaten until late in the season. Though thick, the pods appear slender on account of their great length. The light brown seeds have a tasty flavor which makes them desirable for use as shell beans. Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

84 Decatur 68 days. Absolutely stringless, dark green, round pods, 6 to 8 in. long. Resistant to mosaic and common rust. The white seeds are so desirable for dry shell use during the winter. Pkt. 15¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00.

FAVA BEANS

Pods are glossy green, 7 in. long, and quite broad; they contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. Bansei Edible Soy Beans

BUSH LIMA BEANS

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. Pick the pods as soon as the beans have reached edible size. They are more easily raised than the pole limas but do not yield as much on the same amount of space. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

65 Burpee's Fordhook Bush Lima

Introduced by Burpee; named for Burpee's Fordhook Farms

75 days. **Burpee's Fordhook** is known and grown wherever beans are planted. It is the leading variety of bush lima beans, and in the important commercial bean growing sections it is usually the only variety grown; this surely shows its desirability.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in length, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 5 in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans of a delicious flavor, not unlike chestnuts. Seeds hold their green color until quite old; cream colored when ripe.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large, and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked for a month or more. Fine quality, always salable, attractive appearance, and large pods allow us to say that in bush lima beans, Fordhook is the best for home garden or commercial use.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

63 Burpee's Improved Bush Lima

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The pods are larger, the individual beans, either green or dry, are nearly twice as thick, and the plants are more productive, large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long, and 1 to 1½ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

60 Burpee's Bush Lima

78 days. The original dwarf, large-seeded bush lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each develops into a neatly rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long, 1 to 1½ in. wide and contain 3 or 4 large beans of the highest quality. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

68 Wood's Prolific

Bush Lima

68 days. **Improved Henderson Bush or Baby Lima.** Being early maturing, it is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, ¾ to 1 in. wide, each containing 3 or 4 flat beans of delicious, sweet, buttery lima flavor. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by frost. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

61 Baby Fordhook Bush Lima

70 days. A thick-seeded, small lima bean of far better quality than the flat type. It was designed especially for canning and freezing; home gardeners, too, will appreciate its surprisingly heavy crop of pods. Plant is truly bushy, about 14 in. tall. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod. Seed is thick, green, turning cream when dry.

Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

69 Burpee's Super Green Bush Lima

74 days. A baby bush lima with beans that retain their green color until they are fully matured. Pods are dark green, thick walled, 3 in. long, and contain three, sometimes four, green beans. The yield from a given number of pods exceeds that of other baby lima varieties. Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 85¢; 5 lbs. \$2.00.

71 Thorogreen Bush Lima

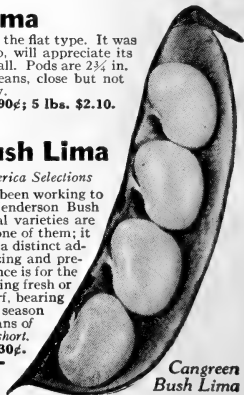

68 days. The plants are dwarf, dark green, erect, bushy, and set a prolific crop of flat pods containing 3 or 4 flattish, oval shaped beans. At maturity the seeds retain a pale green color, and in the edible stage the excellent quality is enhanced by the deeper green color. Highly recommended for canning. Pkt. 15¢; ½ lb. 30¢.

64 Cangreen Bush Lima

Honorable Mention, All-America Selections

72 days. Plant breeders have been working to obtain a lima bean of the Henderson Bush type with green seed. Several varieties are now offered. Cangreen being one of them; it cooks and cans green which is a distinct advantage for canning and freezing and preferred by many whose preference is for the baby butter-lima beans for eating fresh or as dry beans. Plants are dwarf, bearing continuously throughout the season flat pods with 3 or 4 green beans of good quality. Seed crop is short.

Pkt. 15¢; ½ lb. 30¢.

POLE LIMA BEANS

Pole Lima Beans are easily grown in any rich, well-drained garden soil. While they mature somewhat later than bush lima beans, they greatly outyield them per square foot of garden space. Vines should be given support, the most frequently used being rough poles, 7 ft. or more tall, sunk $1\frac{1}{2}$ to 2 ft. deep in the ground and spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of fine soil and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row.

106 Burpee's Improved Giant Podded

90 days. The largest podded of all pole limas. The pods are truly enormous, 7 to 8 in. long, $1\frac{1}{2}$ to 2 in. wide, with five and sometimes six extra large, flat, green beans of the most delicious flavor. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. A marked improvement over Giant Podded. Carefully selected for uniformity, length of pod and productiveness. We can recommend it highly for both home and market use especially to growers having a local trade. The immense size of the pods and the beans always commands highest prices.

Seed crop is very short. Pkt. 15¢; $\frac{1}{2}$ lb. 30¢.

95 Burpee's Sunnybrook

90 days. The popularity of this fine bean is due to the large sized pods and its tremendous yield, each spike carrying from 5 to 10 pods which are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 in. long and $1\frac{1}{2}$ in. wide; the beans retain their green color for a long time. Highly recommended for the home garden.

Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

102 Florida Speckled Butter—Early, hardy, vigorous

78 days. Considered one of the most prolific of limas. Vigorous plants; pods medium dark green, 3 to 3½ in. long, and vying with Carolina or Sieva for popularity in the South. Each pod contains 3 and occasionally 4 beans, which are small, flat, white with approximately one-third of the surface marked deep purple, but if picked when young, the markings on the seed will not yet have been developed.

Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

99 King of the Garden—A good old reliable standby

88 days. A strong grower and uniformly large podded. The pods are from 5 to 7 in. long and contain 5 and often 6 large beans which are easily shelled, of handsome appearance and excellent quality.

Pods are borne most profusely until frost has killed the vines. One of the leading pole lima beans for home and market gardeners.

Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

103 Carolina or Sieva—The "Butter Bean" of the South

78 days. The vines quickly produce a fine crop of small, attractive pods, 3½ in. long, each with 3 or 4 small, flat, green beans of splendid quality. Especially valuable in cooler sections of the country where the large seeded varieties are too late to produce well and in localities with hot, dry summers where pods often fail to set.

Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

105 Burpee's Best Pole Lima

The best thick or "potato" pole lima bean

92 days. The Fordhook among the pole limas, Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each of the vigorous plants which are strong growing, natural climbers.

Burpee's Best will climb 10 to 12 ft. under average conditions, and produce pods in clusters of 4 to 8 along its entire length. The pods are straight, 5 to 6 in. long, $1\frac{1}{2}$ in. broad, and nearly one inch through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans of delicious flavor. Burpee's Best represents a marked improvement over Challenger Pole,

or any other pole lima of the "potato" type, and we suggest growing it in its place. Seed crop is short.

Pkt. 15¢; $\frac{1}{2}$ lb. 30¢.

Detroit Dark Red Beets

115a **DETROIT DARK RED, SHORT TOP BEET** ⊙

60 days. An improved and refined strain of Detroit Dark Red. It has tops which average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red. Smaller tops allow beets to stand closer together in the row.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

115 **Detroit Dark Red, Medium Top**

59 days. An early maturing beet of remarkable uniformity. Splendid for the home garden, market, shipping and canning. Perfectly round and of a deep red color. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Medium size foliage makes it popular with market growers requiring a large top for bunching.

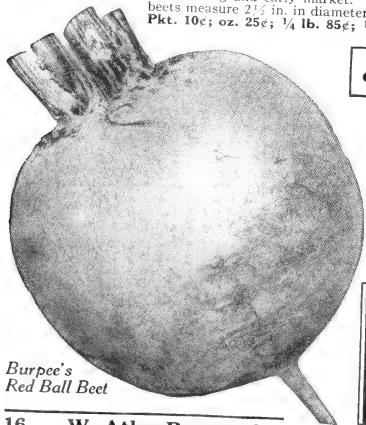

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

109 **Extra Early Flat Egyptian**

53 days. Roots are distinctly flattened and have a small top; flesh is sweet and tender; dark purplish red zoned with a trifle lighter color. Skin is medium red. The earliest of all beets; fine for home garden and valuable for forcing and early market. Fully grown beets measure 2½ in. in diameter.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

125 **Early Wonder** ⊙ — *Quick grower*

55 days. It is semi-globe shaped, about 3 in. across, with medium-sized tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Gardeners like this very early beet; its smooth skin and uniform shape commend it to everyone; its evenness of maturity recommends it as a market variety. Popular beet for canning whole. Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

121 **Burpee's Red Ball** ⊙

60 days. Red Ball is remarkable for its uniform shape, deep colored flesh, and fine sweet flavor. The roots are deep, globe-shaped, growing to 3 in. in diameter, and having a smooth, deep red skin. The flesh is also extremely dark red, free from woody fiber, and very tasty. The quality is always the finest. Thousands of home and market gardeners grow it annually to their profit and entire satisfaction. Its intense dark red color especially fits it for canning. Medium tall tops.

Pkt. 10¢; oz. 30¢; ¼ lb. 95¢; ½ lb. \$1.75.

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make repeated sowings 3 to 4 weeks apart allowing plenty of time for the last sowing to mature before frost. Sow seed in rows 1½ to 2 ft. apart and cover with 1 in. of fine soil. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." A pkt. of seed will sow 25 ft. of row; one oz. 100 ft. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots.

111 Crosby's Egyptian ⊙

56 days. Widely grown for an early crop of beets for the table or market. Roots are top to semi-globe shaped and about 3 in. in diameter. The skin is medium dark red and the flesh is a shade or two lighter, with still lighter zones. The tops are medium size, which, together with small, slender tap-roots, make this beet especially valuable to market growers for bunching. The medium size foliage also permits close planting so that a greater number of beets can be grown on a given area, thus greatly increasing the yield. Earliness, attractiveness and good quality all combine to make Crosby's Egyptian a favorite beet.

Pkt. 10¢; oz. 20¢; ¼ lb. 70¢; ½ lb. \$1.30.

116 Ohio Canner—Good for all purposes

62 days. In shape, the roots vary a little from almost round to slightly flattened; the skin is smooth and very dark red. The color of the flesh is extremely dark and shows hardly any zones. A desirable home garden beet as it remains tender and sweet, whether young or old, small or large. It is also especially suitable for canning. Where deep red interior color and high yield are important considerations, we highly recommend Ohio Canner for market growing.

Pkt. 10¢; oz. 20¢; ¼ lb. 70¢.

120 Winter Keeper—Stores well;

sweet and tender all summer and winter

80 days. A "long season" beet which remains solid and tender all summer and also when stored for winter. As the half-long-shaped roots grow slowly, it is valuable as a late beet, and you will find the Winter Keeper firm and sweet when most others are past their prime. Skin is dark red as is the flesh. Even when the beets get large, they are as tender as much earlier varieties. Home gardeners appreciate its quality; market growers selling direct find it a ready seller.

Pkt. 10¢; oz. 30¢; ¼ lb. 95¢.

107 Burpee's Extra Early ⊙

58 days. Excellent early beet with perfectly smooth globe-shaped roots that are most regular in shape. Will grow to 3 in. in diameter, but, as with all beets, can be used when small. The flesh is dark red and shows hardly any zones. A profitable early, dark red skinned beet with many market growers, especially those having a trade that appreciates quality and attractive appearance in a baby beet. Popular one for the home garden. Flavor is sweet and tasty; ideal for canning or pickling whole. Seed crop is short this year. Pkt. 10¢ oz. 25¢.

128 Burpee's Improved Blood Turnip Beet

59 days. The large beets, 3 to 4 in. across, are round but sometimes deeper than their diameter. The flesh is dark red, occasionally zoned. Though it is a quick grower, the roots will keep a long time in storage. A splendid variety for the home garden and for market gardeners; it is dependable in every way. Flesh is fine grained, tender and most agreeably sweet. It may be grown for early use, summer, fall or winter storing as well as for canning. Because of its quickness of growth, it is especially suited for late sowings. It is really an all-season, all-purpose, deep red table beet of high quality that we can recommend to every one.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

Spinach Beet or Chard is grown for use as "greens." the leaves used to replace spinach during hot weather; the mid-ribs may be prepared like asparagus or, when cut in pieces and fried in batter, make good fritters. Be sure to try Burpee's Rhubarb Chard; it has a different flavor from other Swiss Chards. See page 45 for all varieties

MANGELS and SUGAR BEETS

Used largely for winter feeding of your stock. Sow seed in early spring in rows 2 to 3 ft. apart; cover with 1 in. of soil. A packet will sow 25 ft. of row; an oz., 100 ft.

151 Mammoth Prize Long Red 110 days. Largest and heaviest cropping Mangel. Roots grow to a truly enormous size, in well-prepared, deep soil and a long growing season. Skin is red, flesh white veined pink. Grow ½ to ¾ above surface; easy to harvest. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

145 Giant Half Sugar Rose 90 days. Broad, wedge-shaped Mangel. Skin is bright rose above and white below; flesh is white. Highly nutritious and rich in sugar. Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

BURPEE'S CABBAGE

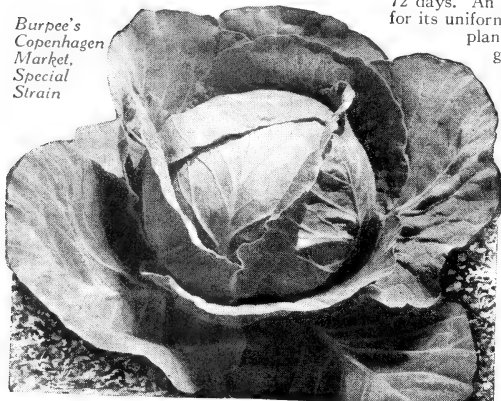

For earliest crop, start early and midseason cabbage seed in hot-bed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become

thoroughly warm. A pkt. will produce about 250 plants, an oz. about 2000 plants. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Treat seed with Semesan to prevent damping-off.

Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢.

Yellows-Resistant Cabbage

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experimental Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly yellows-resistant varieties:

177 Burpee's Allhead Early Cabbage

Burpee's
Allhead

Late or Winter Cabbage

195 Burpee's Surehead

Burpee's
Surehead

Market Gardeners' Strain

93 days. One of the oldest cabbages listed today, Surehead still deserves its name. Our American grown stock is distinct, uniform, and very desirable where a large late cabbage with a flattened head is required. Short stem, small frame, with heads weighing 7 to 10 lbs., 10 to 12 in. in diameter and 6 to 7 in. deep. Good keeper. *Seed crop is very short.* Pkt. 10¢; 1/2 oz. 25¢.

194 Premium Flat Dutch

100 days. The largest cabbage we list—10 to 13 in. across, 5 1/2 to 7 in. deep and weigh 10 lbs. and more. Can of course be used when much smaller. Valuable for late fall and winter use, especially for kraut and winter storage. Interior is well folded. Medium stem. Pkt. 10¢; 1/2 oz. 25¢; oz. 40¢.

The seed crops of some varieties of Cabbage, especially Red and the late Danish Ballhead type, were practically failures, so we regret we are unable to offer them this year.

Chinese or Celery Cabbage

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. A packet will sow about 25 ft. of row, an oz. about 200 ft.

214 Chihli — Earliest maturing, tallest growing

73 days. Should be largely planted, as it is an early, sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3 1/2 to 4 in. thick. The firm, well-blanched, white heads taper near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown because the large, attractive heads sell readily; it is the most popular for the home garden. Very crisp and tender; excellent eating—raw or cooked.

Pkt. 15¢; 1/2 oz. 35¢; oz. 60¢.

212 Pe-Tsai — Medium tall

78 days. Large Cos Lettuce-like heads, 12 to 14 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanched, tender, juicy, and has an agreeably pungent flavor either eaten raw like lettuce or cooked like cabbage. Desirable for home gardens where a head intermediate in size between Chihli and Wong Bok is wanted.

Pkt. 10¢; 1/2 oz. 30¢; oz. 50¢.

211 Wong Bok — Dwarf growing

78 days. Short, broad, tightly folded, well-blanched heads, 8 to 10 in. high. Excellent quality, crisp and delicious; tender and juicy. Hearts are suitable for serving as individual portions. For home use, its fine quality, tenderness and size will be greatly appreciated. Pkt. 10¢; 1/2 oz. 30¢; oz. 50¢.

82 days. This is an exceptionally choice strain of Super Snowball as offered by Burpee. It stands out as the most valuable cauliflower for the home gardener as well as the market grower. Burpeana is dependable, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Burpeana—the Super Snowball Cauliflower

245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in "Dry Weather" a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, give Dry Weather a trial.

Pkt. 15¢; ¼ oz. \$1.00; ½ oz. \$1.85; oz. \$3.50.

250 Improved Super Snowball

82 days. In sections where the Snowball type of Cauliflower is preferred to all others, or matures to best advantage, growers should try this important strain which is produced under ideal climatic conditions at our Floradale Farms in California. Plants are uniform and set a crop of pure white, smooth heads which are notable for the tightness of their curds.

Pkt. 25¢; ¼ oz. \$1.50; ½ oz. \$2.75; oz. \$5.25.

Burpee's Cauliflower seed is produced on our Floradale Farms and is the equal of that grown anywhere in the world.

252 Improved Holland Erfurt

85 days. An especially fine strain of this important variety; very popular on Long Island as well as in other leading cauliflower sections. Plants are fairly short stemmed, really uniform in maturity; heads are flat, hard and compact, and definitely of the true Erfurt type, of which this is the best strain available. Sells readily.

Pkt. 25¢; ¼ oz. \$1.50; ½ oz. \$2.75; oz. \$5.25.

258 Veitch's Autumn Giant

130 days. The finest of the late cauliflowers; it produces immense compact white heads, 8 to 10 in. in diameter. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive. Plants are large and very vigorous.

Pkt. 15¢; ¼ oz. 75¢; ½ oz. \$1.35; oz. \$2.50.

How to Grow Cauliflower

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden. For a main or fall crop, sow the seed in a specially prepared seed-bed or cold-frame about 4 months before your first expected frost. When plants are ready to be set in the garden, space them 1½ to 2 ft. apart, in rows 2½ to 3 ft. apart. A packet of seed will produce about 150 plants; 1 oz. 4000 plants. Days to maturity are from the time the plants are set out in the garden.

CAULIFLOWER BROCCOLI

155 **St. Valentine** 150 days. A type of broccoli which forms large, solid, deep white heads, similar to cauliflower in appearance but requires a longer season to mature. Desirable for climates where cauliflower is difficult to grow. Pkt. 15¢; ½ oz. 45¢; oz. 85¢; ¼ lb. \$3.00.

CHICORY

297 **Witlof (French Endive)** 110 days. Sow seed in the spring, dig roots in the fall; place them in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. When the sprouts break through the surface, the tight blanched heads of young leaves are ready for use as a delicious and appetizing salad.

Pkt. 10¢; ½ oz. 35¢; oz. 65¢.

296 **Asparagus or Celery** 100 days. The young dandelion-like leaves make a tasty salad and may be cut several times in a season. Use either blanched or green. Very easy to grow.

Pkt. 10¢; ½ oz. 40¢; oz. 75¢.

CRESS

364 **Fine Curled (Pepper Grass)** 40 days. It grows very quickly and is of the easiest culture. The finely cut leaves may be used for flavoring salads, for garnishing, or as a green in sandwiches. Used with lettuce, it adds an agreeably pungent taste. At its best when young; succession sowings should be made for a continuous supply.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢.

DANDELION

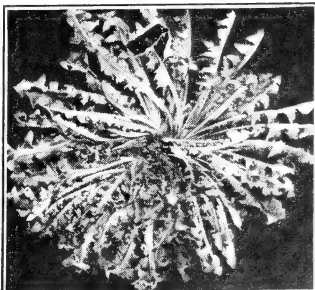

415 **Improved Thick-Leaved** 60 days. The large, broad, thick, dark green leaves are used as "greens" for boiling or the flavor may be improved if the leaves are tied together and the hearts bleached and eaten like endive. In good soil, plants attain a spread of about 1½ ft. Quick growing. Being hardy, plants will live over the winter.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

COLLARDS

299 **Georgia** 80 days. Produces a loose rosette of large, succulent, cabbage-like leaves which make delicious boiling "greens." Does not form heads. Deserves to be better known. 2 to 3 ft.

Pkt. 5¢; oz. 15¢; ¼ lb. 45¢.

Burpee's
Goldinhart

70 days. Our special strain of Red Cored Chantenay. Selected for uniformity, trueness to type, deep exterior and interior color, and a small, indistinct core. Roots are 5 to 5½ in. long and 2¼ in. thick at the shoulder, very gradually tapering to an abrupt stump end. Flesh is fine grained, tender, and of a delicate, sweet flavor. One of the better varieties for planting where the soil is heavier than is desirable for root crops, but at the same time will grow other vegetables. Popular with canners, commercial growers, and home gardeners because of heavy yield, all-round excellence and the bright golden orange flesh clear to the center. Skin is an attractive orange-scarlet. Burpee's Goldinhart Carrot always sells readily in market.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

221 Chantenay or Model — Popular for home and market

70 days. Attractive, deep orange, half-long roots, 5½ in. long and 2¼ in. thick at the top, gradually tapering toward the bottom to a distinctly stump end. The flesh is a beautiful rich orange, tender, of fine texture, and very sweet. Excellent for the home garden and sold on all produce markets; good shipper and winter keeper.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

223 Supreme Half Long — All-America Bronze Medal Winner

73 days. An improved market type of Danvers Half Long. The roots grow 6 to 7 in. long, 2 in. in diameter at the shoulder, and gently taper to a half stump. The skin and flesh are deep orange, the small core being of the same deep color as the outer section. The tops are short but suitable for bunching. Unexcelled for table use.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

232 Tendersweet — All-America Silver Medal Winner

75 days. A long, bunching type which requires a deep soil for best development. When fully mature the roots measure 1½ to 2 in. at the shoulder and 8 to 10 in. long, and taper to a blunt end. The skin is colored rich orange-red and the interior is a deep orange with indistinct core. The quality is excellent and the texture crisp and brittle. The foliage is distinct, as the leaf stalks are tinged purple. Outstanding carrot.

Pkt. 15¢; ½ oz. 35¢; oz. 55¢; ¼ lb. \$1.95.

225 Danvers Half Long

75 days. Well-known main-crop or late carrot, of great uniformity. The deep orange-red roots are 7 to 7½ in. long and 2 to 2½ in. in diameter, tapering gradually toward the blunt end. The flesh is bright orange, fine grained, tender, rich in flavor, and very sweet. Popular for home garden and for market; valuable for winter storing, feeding stock and none better for table use. Very productive; good quality.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

217 Early Golden Ball — Known as French Forcing

60 days. The earliest of all carrots. Excellent for an early crop outdoors or for forcing in frames because of the small size of its tops and the shortness of its roots, which are almost round, from 1½ to 2 in. in diameter, sometimes top-shaped, sometimes broader than long, and rounded at the base. Bright orange skin and flesh. Useful on heavy or shallow soils where long varieties may become rough or misshapen. Exceptionally sweet. Easily harvested.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

234 Imperator — Streamlined favorite

75 days. An exceptionally heavy yielder; always smooth and uniform. The roots are 8 to 9 in. long, 2 in. across the shoulder, tapering to a rather blunt end. Skin is rich orange-red; flesh is very deep orange. In demand by market gardeners, as it has the shape, size, and color to show to advantage, and the sweet, tender quality to further recommend it. Imperator is also the favorite home garden streamlined orange carrot.

Pkt. 10¢; ½ oz. 30¢; oz. 45¢; ¼ lb. \$1.65.

218 Amsterdam Forcing — For home and market use

65 days. While especially valuable for forcing, it is desirable for growing outdoors, either for home or market. Roots are bright salmon-red, 6 in. long, 1 in. thick, blunt ended, with small tap-root. Flesh is crisp, sweet and extremely fine-grained. Core is usually inconspicuous.

Pkt. 10¢; ½ oz. 30¢; oz. 45¢; ¼ lb. \$1.65.

Burpee pays delivery charges anywhere in the U. S. on everything offered in this catalog except large quantities of Vegetable Roots.

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make succession sowings every two weeks allowing plenty of time for the last sowing to mature before frost. Cover with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall and the best for winter storing. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Danvers
Half Long

Tender-
sweet

226 Nantes Half Long Carrot

70 days. Also known as **Coreless**. The handsome, half-long, well-shaped orange roots grow 6 to 7 in. long and are perfectly cylindrical, being from 1 to 1½ in. thick, the whole length ending abruptly in a small, thin tail. They are of delicious flavor, fine grained, tender, sweet, and practically coreless, the pure orange-scarlet flesh extending right through.

Pkt. 15¢; ½ oz. 35¢; oz. 55¢; ¼ lb. \$1.95.

223 Burpee's Oxheart

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet, fine grained and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots some times fail to make attractive roots. Fine for home use and busheling rather than bunching. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

Carrots may be served in many ways—cooked alone; used in soups, stews, chowders with other vegetables or cooked with roasts. Serve as a relish when chilled and cut lengthwise in slender strips. Splendid when shredded and used in salads. Refreshing appetizer when served as chilled juice.

229 Burpee's Improved Long Orange

85 days. If left to reach full growth, roots will measure 10 to 12 in. long and 2 in. thick at the shoulder, slightly tapering to a point. Of uniform size, with beautiful deep orange skin and bright orange-red flesh. A superb carrot for those having a deep, rich, mellow soil. A heavy cropper and a perfect winter keeper. It is also used for stock feeding. Tender and tasty.

Burpee's Celtuce

Burpee's CELTUCE

290 Burpee's Celtuce belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether Celtuce stalks are to be eaten raw or cooked, you remove the lower leaves (see stalks at left) and then cut off all the outer skin and fibrous layers down to where they become light green and tender (see cross-section of stalk at far left). Cooked celtuce stalks have a pleasing, mild flavor. Young leaves have 4 times the Vitamin C content of head-lettuce leaves.

Pkt. 15¢; ¼ oz. 35¢; ½ oz. 65¢; oz. \$1.25.

Celeriac

(Turnip-Rooted Celery)

293 Giant Prague 120 days. The edible portion is the large, thick root, which should be used when it has grown about 2 in. across. Celeriac has a flavor similar to Celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand, as you would beets and carrots, and used throughout the winter. *Seed crop is very short.*

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

Celery is offered on the following page

Burpee's Fordhook Celery

Famous for Tenderness and Flavor

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each.

Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of Burpee's Fordhook, the finest flavored, large hearted celery.

Pkt. 25¢; ½ oz. 75¢; oz. \$1.35; ¼ lb. \$4.50.

266 White Plume—Highly recommended

112 days. The earliest and the most easily blanching celery; at its best right after digging. Foliage is light green tinted with white. When blanching, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Grown by market gardeners having a local trade, and a favorite in home gardens for fall and early winter use but not recommended for winter storage as it does not keep well.

Pkt. 10¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$3.00.

260 Burpee's Golden Self-Blanching

115 days. This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor, which is delightfully sweet and nutty. Popular early celery.

Pkt. 20¢; ½ oz. 65¢; oz. \$1.20; ¼ lb. \$4.25.

282 Giant Pascal—Also known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall and thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction. Enormously productive and of good quality.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.25.

275 Winter Queen—Dwarf grower; blanches quickly

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts which are tender, crisp and of excellent flavor. Valuable for the home and market gardener alike.

Pkt. 10¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$3.00.

Burpee's Fordhook the finest flavored as well as the best fall and winter Celery

267 Easy Blanching—Stalks easily blanched

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.25.

276 Utah or Golden Crisp

130 days. An excellent green celery for fall use or winter storing. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of the most delicious flavor. Had the market practically all to itself in Salt Lake City, but now its fame has spread far and wide. Highly satisfactory for all purposes.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢; ¼ lb. \$3.50.

Turnip-Rooted Celery (Celeriac), see page 23.

268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. Some gardeners consider it the best early celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers, whether for home or market. It has proved satisfactory in all sections where celery can be grown.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$4.00.

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from field setting of plants. Treat seed with Cuprocid or Semesan to prevent damping-off of the seedlings; full directions for use on every package.

BURPEE'S SWEET CORN

Plant the seed after all danger of frost has passed and the soil has become thoroughly warm. Sow either in rows $2\frac{1}{2}$ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also

make successive sowings every 10 to 14 days, allowing enough time for your last planting to mature before the first expected frost in your locality. Sweet Corn maturing in the fall is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels are then insured. One pkt. will plant 4 rows, each 25 ft. long; 1 lb. 300 hills.

Hybrid Sweet Corn — Wilt resistant

Hybrid Corns are of special value to market growers and canners and many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to pull ears from one sowing over a longer period, plant an open pollinated or standard variety of corn. To produce Hybrid Sweet Corn, crosses between an inbred strain and a standard variety or crossing two inbreds must be done each year. Seed saved from hybrids will not come true to type the following year. You must get new seed each year.

330 Lincoln — All-America Bronze Medal Winner; yellow grains

83 days. An early midseason hybrid yellow corn, developed at the Connecticut Agricultural Experiment Station. Ears are large, 8 to 9 in. long, tapering, well covered with husk, and have 12 to 16 rows of bright golden kernels of good quality. Tall grower. Desirable for home and market. Ears are well filled.

Pkt. 15¢; $\frac{1}{2}$ lb. 40¢; lb. 70¢; 2 lbs. \$1.30; 5 lbs. \$3.00.

334 Stowell's Evergreen Hybrid — White kernels

90 days. Ears $7\frac{1}{2}$ to $8\frac{1}{2}$ in. long, with 14 to 18 rows of deep, narrow, white kernels which are tender and very sweet. Recommended for home or market garden as well as for canning. 8 to 10 ft. tall. Differs from open pollinated Stowell's Evergreen in having a smaller ear, narrower and deeper kernels and greater uniformity of maturity. The ears are about 2 in. across at the butt and taper slightly.

Pkt. 15¢; $\frac{1}{2}$ lb. 40¢; lb. 75¢; 2 lbs. \$1.40; 5 lbs. \$3.25.

309 Golden Cross Bantam — Light golden yellow kernels

If you want a larger ear, if you want an earlier corn, a more productive one, we have varieties and hybrids for your needs, but if you want the best and sweetest for your table, it's true 8-rowed Golden Bantam. It is always the first real sweet corn demanded in market, and it is undoubtedly the most popular with the home gardener.

BURPEE'S CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10

seeds in each hill, and cover with $\frac{1}{4}$ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. A pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. Control cucumber insects with Red Arrow Garden Spray and Slug Shot Dust. In descriptions, we refer to "White Spine" and "Black Spine" cucumbers; see page 29 for explanation of these two different types.

Burpee's Sunnybrook is our extra dark green streamliner for the modern market and shipping; it is trim and slender, with good keeping qualities.

374 Burpee's Sunnybrook

60 days. Burpee's Sunnybrook is an outstanding cucumber of the long, slender, dark green, white spine type with stripes absent or inconspicuous for considerably less than $\frac{1}{4}$ its length. Whether used for pickling when small, or for slicing when fully grown, Burpee's Sunnybrook is a valuable cucumber for the home garden, local markets and distant shipping. Fruits are 9 to 11 in. in length and 2 to $2\frac{1}{2}$ in. in diameter when mature, tapering symmetrically toward either end; flesh is firm and thick, with few seeds. The extremely dark color is maintained for a long time after picking. As the seeds form late in the season, the edible period is longer than that of most varieties. We highly recommend Sunnybrook. Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25.

379 Burpee's Extra Early

White Spine—Large, early and prolific

55 days. Fruits are almost cylindrical, 7 in. long and $2\frac{1}{2}$ in. thick. They have a beautiful deep green skin which is practically free from ridges. They are excellent for slicing when fully grown or when small for pickling. Vines make a heavy growth and produce their fruits early and very freely. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 80¢.

399 Improved Long Green

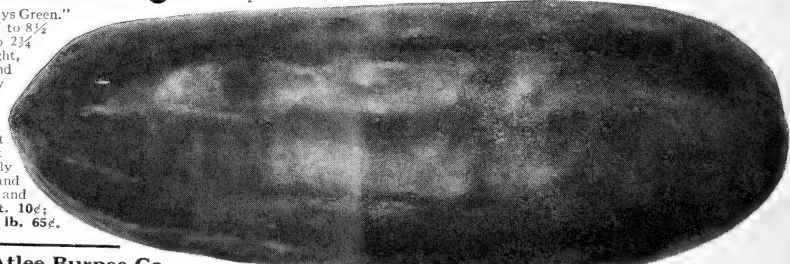

60 days. (London) Fruits 10 to 12 in. long, 3 in. thick, and more or less warted. Very prolific. Beautiful glossy green skin and pure white, solid flesh; tender and crisp. A general purpose cucumber, popular for pickles or slicing and although it is a black spine cucumber it is extremely popular for market, the fruits being marketable when only about half grown. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. \$1.00.

381 Arlington White Spine

60 days. Attractive, long, straight fruits of a moderately dark green color, 7 to 8 in. long and $2\frac{1}{2}$ in. thick, with square, blocky ends. Flesh is white, crisp, and solid. Splendid for slicing or dill pickles. Extremely productive. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 65¢.

384 Black Diamond

54 days. "It Stays Green." Fruits grow $7\frac{1}{2}$ to 8 $\frac{1}{2}$ in. long, $2\frac{1}{2}$ to $2\frac{3}{4}$ in. across, straight, blunt ended and have a very deep green skin. The flesh is pure white, refreshing and tasty. It is of the finest quality. Largely used in home and market gardens and by shippers. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 65¢.

400 Davis' Perfect—Crisp and tender

58 days. Shapely white-spine cucumber, 9 to 10 in. long and 2 to $2\frac{1}{2}$ in. thick in the middle, slightly tapering at both ends. The skin is a rich deep green and the flesh is pure white, solid, brittle, and tasty. Its eating qualities are excellent, due to its thickness and the lack of seeds. Retains its color for a long time after being picked; this makes it valuable for market and shipping as well as for home use. Davis' Perfect is also adapted for greenhouse culture. Heavy producer. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 80¢.

380 A and C—A great favorite

60 days. The white-spined fruits grow about 10 in. in length and $2\frac{1}{2}$ in. thick, well rounded at the ends and dark green throughout. The rich, dark green color is retained for an unusually long time after picking—an especially desirable feature for those sending their cucumbers to market. This characteristic, together with ideal shape, size and quality, make A and C valuable for the home garden as well as for market. White, crisp flesh of delicious flavor. Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25.

Don't forget to plant dill seed. The dry or green branches and the dried seeds are prized for flavoring pickles. Dill is listed with other popular herbs on page 32. Some housewives use the dried seeds of coriander to flavor their pickles; dill, however, is the universal favorite.

Its attractive appearance makes it a ready seller on the market stall and none the less popular with the home gardener.

Pkt. 15¢; oz. 30¢; $\frac{1}{4}$ lb. \$1.00.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. "White Spine" cucumbers turn to a creamy white when old; "Black Spine" varieties turn to a yellowish orange when matured. All the Pickling Cucumbers listed below belong to the black spine group, as does Improved Long Green; all others that we offer are white spined.

Early Fortune

401 Early Fortune \odot —Early, dependable, and highly productive

BURPEE'S LETTUCE

Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool soil, so that the seed should be sown thinly in the spring as soon as the soil can be worked, in rows 1 to 1½ ft. apart, and covered with ½ in. of fine soil. Several successive sowings may follow about two weeks apart then discontinue sow-

ings until late summer when they may be made to provide lettuce during the fall. Thin heading varieties to stand 1 ft. apart; loose-leaf or cutting varieties, 4 to 6 in. apart. For very early lettuce, start seed indoors or in a coldframe, setting the plants outdoors when danger of frost is past. A pkt. will sow 50 ft.; 1 oz. 300 ft.

White
Boston

476 Burpee's Wayahead ⊙

77 days. A favorite with both home and market gardeners, as it combines good appearance with excellent quality. Highly recommended as a spring and fall lettuce for planting in the open or in frames. It is a vigorous, healthy variety, forming plants of medium size with shiny, bright green blistered foliage. The buttery heart is a beautiful creamy yellow. Heads well under adverse conditions, such as drought and hot weather, which likely explains its widespread popularity. Selections are being made in our test plots each year in order that our seed stocks may be produced from the most heat-resistant plants.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

Butterhead Varieties

These grow to good size and develop solid heads of good form, resembling a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. In hot weather sections, they may not head as readily as the Crisp-Head varieties but will grow rapidly and produce tender, tasty leaves of delicious flavor. Days given are from the time of sowing the seed until lettuce is ready for cutting.

480 White Boston ⊙

80 days. One of the most successful and largest selling of all butterhead lettuces. The large heads are tightly folded over the top so that the solid heart blanches to a bright creamy yellow of high quality and fine texture. The outer leaves are a uniform light green entirely free from brown markings or reddish tinge. Used extensively for market plantings, both under glass and in the open in the Eastern States, and for home gardens throughout the country. Because of the public preference for an entirely green leaf lettuce, White Boston is replacing Big Boston to a great extent in many sections. Our strain is very uniform and shows high resistance to tipburn. White seeded.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

475 Big Boston—Very widely grown

83 days. Medium large, attractive heads, the outer leaves being light green, smooth, and tinged reddish brown at the edges. Heads particularly well during cool weather, forming a tightly folded light golden yellow heart of beautifully blanching, tender, juicy leaves.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

474 Early May King—The earliest to head

75 days. Quick growing, hardy lettuce with medium-sized, tightly folded heads with few light green outer leaves slightly edged brown. The inside of the head is bright yellow while the heart is blanched to a delightful light creamy yellow color. Plants are short, compact and practically all head. Valuable for outdoors or for forcing in greenhouse or frames. The earliest of the butterheads.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

Loosehead or Cutting Lettuce

Considered the best type for general home garden use, especially in sections where summers are hot.

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing during the summer as they will withstand heat.

485 Grand Rapids ⊙—Of excellent quality

45 days. Widely grown non-heading lettuce with intensely fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, but is not less valuable for growing outdoors during the spring, summer, and fall. Thick sowing will give an abundance of young tender leaves very early in the season, but if the plants are spaced 12 to 18 in. apart each way, they will produce immense round masses of tender, juicy, light green leaves of good flavor.

Pkt. 10¢; oz. 20¢; ¼ lb. 70¢.

497 Early Prizehead—Crisp, sweet

45 days. One of the most popular varieties, producing large, tender, loose heads of bright green, curled and crimped leaves which are heavily shaded with brownish red. Of quick growth and excellent flavor. Home garden favorite.

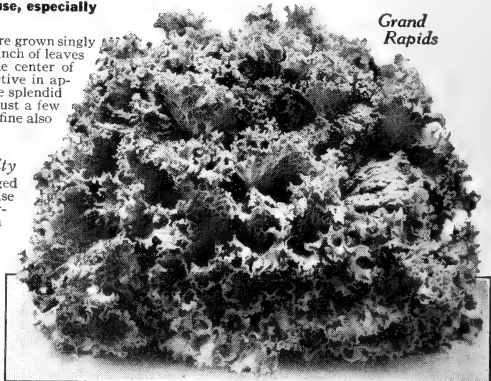

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

490 Early Curled Simpson

43 days. Also known as Silesia or White-Seeded Simpson. The large plants have very light green, crumpled and slightly frilled leaves. Forms a compact bunch of crisp, brittle leaves of excellent flavor. Tender, succulent, and of decidedly piquant taste. Fine for spring and early summer.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

Grand
Rapids

493 Black-Seeded Simpson ⊙

45 days. Splendid non-heading or cutting lettuce with broad, light green, frilled and crumpled outer leaves; center leaves blanch almost white. Grows quickly, is early and of extra fine quality. The texture of the leaves is brittle and crisp. The flavor is delicate and appetizing. We can recommend this variety for any section where lettuce can be grown either for local market or home use.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

Crisp-Head Lettuce

530 Burpee's Iceberg —The original Iceberg

85 days. Attractive light green, wavy, fringed and heavily savoyed leaves with edges tinged with light brown. The heads are compact, not too large, and have few outer leaves and most delicious, crisp, tender hearts blanched to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand some hot weather; it is well suited to Eastern and Mid-Western growing conditions. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with the familiar "New York and Imperial" strains of lettuce, which are commonly called "Iceberg" by growers, shippers and some produce merchants. **Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.**

484 Mignonette —The smallest of the crisp-heads

80 days. Splendid black-seeded early lettuce of good quality; outer leaves are medium green tinged with reddish brown, heavily but finely crumpled and curled. Heads are small, compact and blanch light creamy yellow throughout. It heads well in warm weather. **Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.**

531 Imperial 44 —Blight resistant

84 days. Sure header, even during hot, dry weather, and of great commercial value. To date, Imperial 44 is the most dependable crisp lettuce for the East. Heads medium large, slightly flattened, extremely compact; dark green, heavily savoyed leaves. If you have had difficulty growing head lettuce, give Imperial 44 a careful trial. White-seeded. **Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.**

529 Imperial 847 —Blight resistant

84 days. Heat-resistant strain with nearly as much ability to head under unfavorable conditions as Imperial 44. The head is larger and deeper and it retains its marketable appearance longer than that variety. Attractive and of good quality. Black-seeded. **Pkt. 10¢; oz. 40¢; ¼ lb. \$1.10.**

526 New York 515 —Uniform header

83 days. The large heads are solid, bright green in color, bleaching to a splendid white; always crisp, juicy and sweet. Has been bred for resistance to tipburn; stands hot weather remarkably well. Also makes wonderful heads in the fall from late sowings. **Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.**

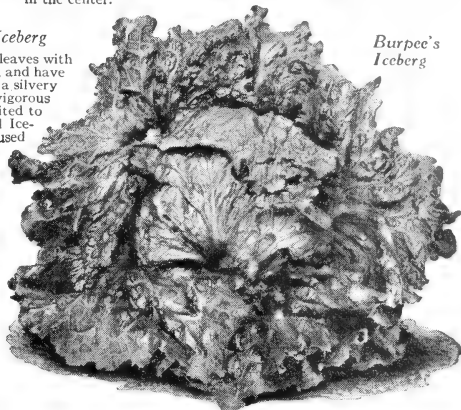

523 New York 12 —Most widely adapted

85 days. The standard crisp-head lettuce with large heads of dark green, heavily curled and savoyed leaves with blanched, silvery white heart. Successfully grown outdoors almost anywhere, spring, summer and fall. **Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.**

527 New York P.W. 55 —Very early

80 days. A small, extra-early crisp-head lettuce that will withstand quite hot weather, so is well adapted for summer growing in the East, South and Middlewest. *All-America Winner*. **Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.**

These form tightly folded heads, and where the plants are grown singly at a suitable distance apart, they make very large, round, solid heads which are blanched silvery white or creamy yellow in the center.

Burpee's Iceberg

522 Hanson —Very dependable header

85 days. Grows into a quite broad, slightly flattened head of beautiful light green, savoyed and curled leaves of crisp texture. Entirely free from any bitter taste, of the highest quality—mild, tender, juicy and well blanched. Its reliability for sure heading, even during midsummer, is widely known and has given it much of its deserved popularity. A wonderful home garden variety for summer use. **Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.**

473 Cosbia 40 —Sure header from spring sowing

80 days. The frame of Cosbia 40 is small, the leaves medium green and the head is large in proportion to the size of the plant, weighing about three-quarters of a pound when trimmed. The solidity of the head compares favorably with that of Imperial 44; Cosbia 40 is a few days earlier, more resistant to tipburn, and, while smaller, is still large enough for home and local market use. An "Iceberg" type lettuce that can be grown in sections with hot summers. Recommended only for spring planting. **Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.**

520 Cosberg 600 —Withstands heat

85 days. *Honorable Mention, All-America Selections*. A distinct crisp-head lettuce developed at the Beltsville, Md., Station of the U. S. Department of Agriculture. Bred for resistance to tipburn and ability to head during hot, dry weather. Interior is solid, crisp, tender and of a remarkably sweet flavor; entirely free from any bitter taste. Wonderful home garden variety for summer use. **Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.**

Cos or Romaine Lettuce

540 Dark Green 84 days. Self folded head, which is well blanched, loaf shaped, of tender and luscious quality. For home and market. **Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.**

Burpee's Black Beauty Egg Plant

Cos Type Batavian Endive

EGG PLANT

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in boxes or shallow pans, 8 to 9 weeks before the time to set the plants in the open ground. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. One pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in description represent the time required until fruits are ready from setting of plants.

420 Burpee's Black Beauty 73 days. The rich purplish black fruits grow to an enormous size, but may be used while still quite small for they are tender and tasty at all stages. When fully developed, they are blunt and broad at the blossom end, weigh several pounds each and are free from spines or thorns. Plants are very productive; fruits are most attractive. Valuable alike to the market and home gardener. **Pkt. 15¢; ½ oz. 50¢; oz. 90¢.**

429 New Hampshire 60 days. An extra-early hybrid egg plant doing well everywhere and especially valuable in northern sections where seasons are short. The plants are of the low bush type and bear much earlier than other varieties. **Pkt. 15¢; ½ oz. 50¢; oz. 90¢.**

423 Florida Highbush 80 days. Plants are of strong, upright, vigorous growth, and bear many large, elongated, cylindrical, dark purple fruits of uniform size well above the ground. Somewhat resistant to fruit rot and blight; withstands drought to a remarkable degree. **Pkt. 10¢; ½ oz. 40¢; oz. 75¢.**

421 Ft. Myers Market 80 days. Large oval fruits of deep purple color and extremely smooth skin. Of considerable resistance to disease and excessive heat as is characteristic of the high bush type. **Pkt. 10¢; ½ oz. 40¢; oz. 75¢.**

422 New York Improved Spineless 76 days. An entirely spineless, large purple egg plant whose fruits are broad, oval and hold their deep glossy color for a long time. The flesh is firm, meaty, and of excellent quality. Plants are low branching, bear almost continuously. **Pkt. 15¢; ½ oz. 50¢; oz. 90¢.**

ENDIVE

For early use, sow seed in the open ground as early as it can be worked; for main crop, sow in late spring. When nearly full grown, the plants are blanched for 2 to 3 weeks by tying the outer leaves together over the center or by laying a board upon them. Used principally as a salad. A pkt. will about 20 ft. of row; 1 oz. 100 ft. (For French Endive, see Chicory, Willow)

Widely used for "greens."

447 Blue Curled Scotch 55 days. Dwarf, compact, short-stemmed plants with finely curled, bluish green leaves of delicious flavor. Hardy growth. Plants grow 12 to 18 in. tall with a spread of 16 to 24 in. In great favor for home garden and market. Pkt. 10¢; oz. 25¢; ¼ lb. 80¢.

MUSHROOMS

9982 Pure Culture Tobacco Stem Spawn

Crumbed Tobacco Stem Spawn is the latest scientific development in the production of Pure Culture Mushroom Spawn. The material is easier to handle, the growth is more vigorous, and results are more certain as more particles of the dried spawn come in contact with the manure. Adverse growing conditions are more readily overcome, as the tobacco stem medium is high in food elements needed by the growing Mushroom, resulting in stronger and more rapid growth. If you have had indifferent success with Mushrooms, try this improved form of spawn. One package will plant 12½ sq. ft. Cultural directions with every package.

50¢ per package; 3 pkgs. \$1.35; 12 pkgs. \$4.25, postpaid.

MUSKMELONS (CANTALOUPE)

The most suitable soil for melons is a rich, warm, sandy loam. Sow the seed after the soil has warmed up and the weather is quite settled, putting 8 to 10 seeds in a circle in slightly raised hills and cover the seed with one inch of fine soil. The hills should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a hill after the plants are well established. Well-rotted manure placed beneath the hill and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 hills; 1 oz. about 50 hills.

WATERMELONS

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover $\frac{1}{2}$ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2, or 3 are removed from each vine. In sections, especially the North, where summers are short, we suggest growing Burpee's Fordhook Early, Cole's Early and Dixie Queen. One pkt. will plant 10 hills; 1 oz. 30 hills.

They are blunt at both the stem and blossom ends. Skin color is a beautiful deep green with fine veining, and the flesh is bright crimson, crisp, and of a remarkably luscious flavor. Rind is thin, making this melon unsuitable for distant shipping, but few varieties can compare favorably with it for home gardens, roadside stands or for nearby markets. Quality is unexcelled.

682 SWEET SPANISH ONION

UTAH STRAIN

Sweet Spanish

110 days. The very large, globe-shaped Spanish Onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild, fine grained and sweet—excellent when cooked or for use in salads or other ways without cooking. They are remarkably uniform, have light yellow skin and pure white, firm, crisp, and tasty flesh. Although no onions of this type will keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. Onions of the Spanish type grow to the largest size when they are planted to form their bulbs during the short days of spring or fall. In northern states, seed is usually started early.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢.

How to Grow Onions

The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow 20 ft. of row; 1 oz. 200 ft.

684 White Sweet Spanish—Utah Strain

110 days. A true Sweet Spanish, identical with the original Sweet Spanish in every way except color; skin is pure glistening white instead of yellow. Flesh is pearl-white, of mild flavor, solid and crisp. Its large size and attractive appearance make it a ready seller on market and roadside stands.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢.

676 Early Yellow Globe—Fine keeper

102 days. Beautiful globe-shaped, deep yellow skinned onion with clear white flesh of mild flavor. Extremely early and unusually large; an enormous cropper and a good winter keeper due to the thick, tight skin of the bulbs.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢.

674 Yellow Bermuda—Very early

95 days. The most widely grown of all Bermuda Onions; medium sized, with straw-yellow skin and pure white, mild flesh. Desirable for home garden. Shipped North in large quantities annually for early spring use. Good table quality.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

680 Southport Yellow Globe

115 days. This is the finest strain of this variety in existence. The onions mature all at the same time and are remarkably uniform in size, shape, color, and quality. The skin is bright golden yellow and the flesh is fine grained, creamy white, fairly strong in flavor, solid, and juicy. The roots are deep globular, with rather full shoulder and a thin, slender neck. Largely grown by home and market gardeners. Good keeper, very productive and cures easily.

Pkt. 10¢; ½ oz. 40¢; oz. 75¢.

672 Ebenezer

120 days. Bulbs are a flattened globe, 2½ to 3 in. or more across when well grown, yellowish brown skin with firm yellowish white flesh of exceptionally mild flavor. One of the best winter keepers, remaining in good, hard condition until spring. Grown extensively for sets because of their good keeping quality, heavy yield and the fact that a smaller percentage of the sets run to seed than other yellow-skinned onions.

Pkt. 10¢; ½ oz. 35¢; oz. 65¢.

687 Red Wethersfield

112 days. The skin is deep rich purplish red, smooth and glossy. The flesh is white, lightly tinged with pinkish rose near the skin; fine grained and firm. The flavor is strong. Will keep in storage for a long time. Splendid for the production of red sets; unexcelled for both home and market where red onions are wanted. Mature onions are large and flattened.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

690 Southport Red Globe

115 days. Resemble other Southports in size, shape, and quality, but the skin is a glossy light red color. The flesh is fine grained, white, always mild and pleasant. Heavy yielder and an excellent keeper. In great demand in the Middle-west and South, where red onions are very popular. Deep globular bulbs with medium thick scales.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

696 Southport White Globe

112 days. Most attractive large round onion with pure paper-white skin. The flesh is also pure white, sweet, juicy, and of most delightful mild flavor. A main-crop variety which will keep well for some time. Always a ready seller in the market; popular with home gardeners. Our strain is uniform and carefully selected.

Produces medium sized bulbs which are globular in shape, light golden brown in color, and remarkably smooth, firm and uniform. Flesh is yellowish white and of strong flavor. A great favorite because it is dependable, productive and a good winter keeper. Ours is a selected stock of definite characteristics that is certain to please.

Skin is thin, of a handsome golden brown tint, and the flesh is pure white, solid, crisp, juicy, and agreeably mild. A popular commercial Spanish type onion grown largely in the South for spring shipment North. Not recommended for winter storage.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

679 Brigham Yellow Globe

110 days. Preferred by many gardeners on account of its superior keeping qualities and large yields. Onions are solid, true globe shape, and are grown from selected bulbs of the original strain. Flesh is creamy white, of fine, firm texture and moderately strong flavored; skin is deep yellow. Scales are thick and tight. Can be depended upon to grow successfully on muck or heavy soil.

Pkt. 10¢; ½ oz. 40¢; oz. 75¢.

711 Burpee's Gigantic Gibraltar 115 days. Productive, perfectly globular onion of enormous size, often weighing as much as 3 lbs. Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

It is a very satisfactory bunching or "green" onion and used for pickling before it is fully grown. Keeping quality is very good.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

Green Bunching Onions

703 Green Bunching

100 days. Superior to other varieties for bunching, since bulb development is slower, making the stems or shanks just the right size at green bunching stage. Mature bulbs are not good winter keepers. Sow seed twice as thickly as recommended for regular onions and do not thin out.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

GARDEN PEAS

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in midsummer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 1 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. Provide supports for the tall-growing varieties. A pkt. will sow 20 ft. of row; 1 lb. 100 ft.

Smooth-Seeded Early Peas

Mammoth
Melting Sugar Pea

EDIBLE-PODDED or SUGAR PEAS

Cook like string beans

Sugar Peas possess the tenderness and fleshy, podded qualities of a snap bean and the flavor and sweetness of fresh green peas. Pick pods when peas are beginning to form and cook like snap beans. When young, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap or string beans, seeds may be eaten as shelled peas. Vines should be given support of string or brush for best results.

728 Hollow Crown 10

100 days. On appearance alone this selection is superior to regular strains of Hollow Crown, but its principal merit lies in its small core, which eliminates a certain amount of toughness when cooked.

Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting. Peanuts are shipped in the shell to prevent damage to the tender seeds. They can be planted either shelled or whole.

713 Spanish 110 days. The dwarf bushes grow close and are easily cultivated and gathered. The kernels are small and very sweet. Early, and a heavy bearer. Vines make good fodder for stock.

How to Grow Peppers

Seed should be sown in a hot-bed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants; 4 to 6 oz. will furnish enough plants for one acre. Treat seed with Cuprocid or Semesan to prevent damping off. Days to maturity given in descriptions are from the time the plants are set in the garden.

BURPEE'S RADISHES

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed of **spring and summer radishes** as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{2}$ in. deep. Thin small varieties to stand 1 to $1\frac{1}{2}$ in. apart in the row; larger varieties, 3 to 4 in. apart. Make succession plantings every 10 days until early summer, then resume one month before frost. Seed of **winter radishes** is sown in the summer for fall and winter use. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

Spring Varieties

910 Burpee's Red Giant ☉

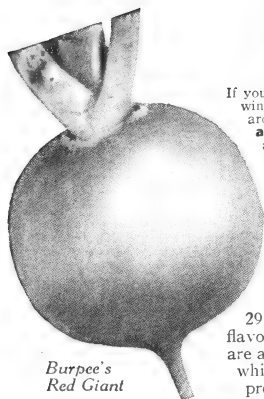

29 days. This remarkable radish combines large size with tender crispness and mild flavor. The roots, even though they grow to the enormous size of $1\frac{1}{2}$ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red. The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when $\frac{1}{2}$ in. in diameter; or ten days later when roots measure $1\frac{1}{2}$ in. or more—it's always crisp, sweet and tender.

Pkt. 10¢; oz. 35¢; $\frac{1}{4}$ lb. 95¢.

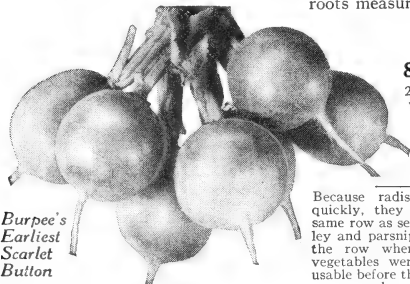

877 Burpee's Earliest Scarlet Button ☉

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Its earliness, the beautiful bright scarlet color, and its unusually brittle and delicious quality make it most desirable for home gardeners and the larger growers as well, either outdoors or under glass.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

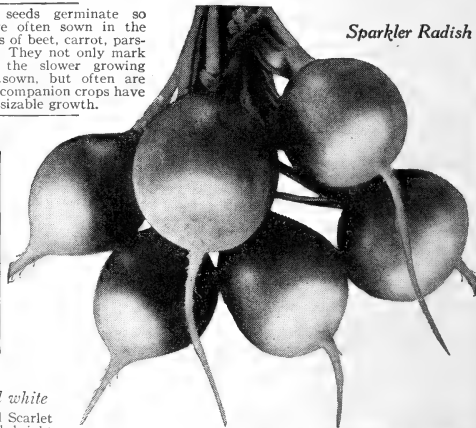

Burpee's Red Giant

Burpee's Earliest Scarlet Button

Because radish seeds germinate so quickly, they are often sown in the same row as seeds of beet, carrot, parsley and parsnip. They not only mark the row where the slower growing vegetables were sown, but often are usable before the companion crops have made any sizable growth.

Sparkler Radish

Collection

Three Extra Fine Radishes

Several sowings of Spring Radishes may be made at 10-day intervals in early spring to provide a continuous supply of fresh, crispy radishes for your table. We have selected three very choice varieties for this offer:

Rapid Red (round red), **Sparkler** (round red and white), and **White Icicle** (long white).

7015—3 Pkts., 1 each of these 3 extra choice named radishes (value 30¢), for only **25¢**

7016—3 Ozs., 1 oz. each of these three separate named varieties (value 90¢) for only **75¢**

893 Sparkler—Attractive, scarlet heavily tipped white

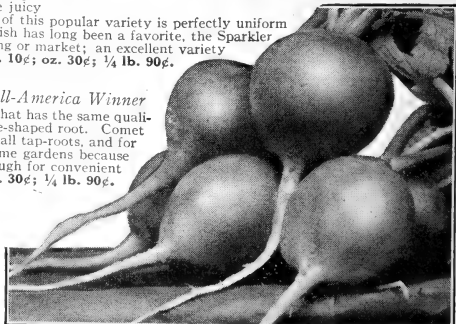

25 days. Choice early variety that is a superior strain of the old Scarlet Turnip White Tip. Small round roots, $1\frac{1}{2}$ in. in diameter, with bright scarlet top, a clear white base, and small, slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. Our stock of this popular variety is perfectly uniform and remarkably fine. While the white-tipped Scarlet Turnip Radish has long been a favorite, the Sparkler strain is unusually desirable. A very attractive radish for bunching or market; an excellent variety for the home garden, greenhouses and spring frame forcing. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

890 Comet ☉—Bright scarlet, long standing; All-America Winner

25 days. Bred to meet the increasing demand for an early radish that has the same quality as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; the roots are globe to olive-shaped, bright scarlet, small tap-roots, and for eating and keeping qualities it is surpassed by none. Ideal for home gardens because it will remain crisp and solid for a long time. Tops are large enough for convenient bunching, making it desirable for commercial use. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

895 Cavalier—Oblong globe shaped

25 days. Our strain of this important variety has been rigidly reselected and represents an elite stock suitable for use by the most critical trade. Roots are highly colored, oblong globe shape, bright scarlet, firm, crisp flesh, and the short tops make it especially suitable for growing on muck land as well as upland soil. For home and market. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

Cavalier Radish

878 Burpee's Rapid Red Radish

23 days. A radish everyone should plant; it is early, of fine quality, refined, smooth, attractive appearance and pungent flavor. Small, bright red and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crisper their flesh and the more delectable their flavor.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

Burpee's
Rapid Red

886 Crimson Giant Globe

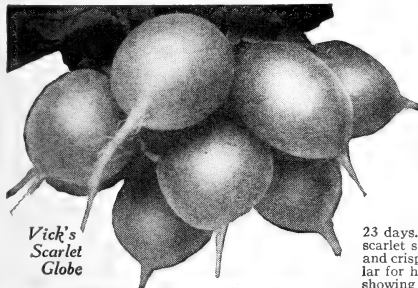

29 days. Sweet, crisp, juicy, brittle, and a wonderful yielder. A fine giant bright red radish. This radish differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh. It is a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Crimson Giant should be thinned to a wider spacing than smaller varieties; we suggest leaving at least 2 in. between plants for full development.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

883 Vick's Scarlet Globe

24 days. This grand radish has established a good reputation as a forcing sort. Grows round to olive-shaped, bright scarlet radishes, 1 in. in diameter. It is crisp and tasty, with fine white flesh and a medium-sized top; right for bunching. Does equally as well outdoors for either the market or home garden; popular everywhere.

Sow Burpee's Guaranteed Seeds — the Best that Grow.

Winter Radishes

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds. Give plants plenty of room by thinning out when young to stand 3 in. or more apart.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢.

Summer Radishes

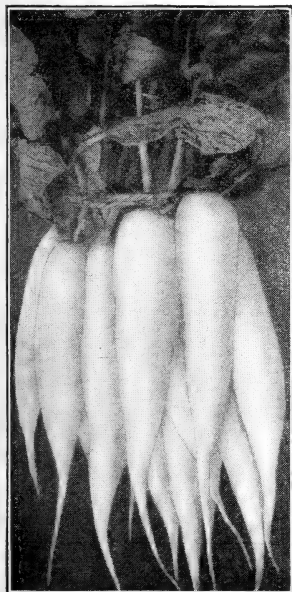

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. Flesh is mildly pungent.

928 Early Long Scarlet Short Top 30 days. Without exception the very best long, brittle red radish. Almost 6 in. in length, and matures in about 4 weeks. Our strain of this beautiful long radish is simply perfection. It is an attractive bright scarlet-red color. BURPEE'S TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with $\frac{1}{4}$ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly

in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. A pkt. will produce about 200 plants; 1 oz. 2000 plants; 2 oz. will furnish enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocid to prevent damping-off of seedlings caused by soil and seed-borne diseases.

The plant is short stemmed and bushy, but with no self-topping tendency. Pink Fruited Tomatoes

Burpee's
Globe

1085 Sweetmeat —Wilt-resistant

66 days. One of the handsomest pink tomatoes we have ever seen, semi-globular in shape, weighing 5 ozs. and more. They ripen evenly throughout and are quite free from cracking. Heavy vines give ample protection to the fruit. Flesh is solid, fine grained and of the most delicious flavor. Sweetmeat fills a definite place as a wilt-resistant, uniformly colored pink of second-early season.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1092 Burpee's Globe

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large sized, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1114 True Giant Ponderosa

81 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeably mild flavor. People who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor. Essentially a home garden tomato.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1101 Oxheart—Extra large, deep fruits

86 days. One of the largest tomatoes ever introduced, some fruits weighing 2 lbs. each. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Seed crop is very short; can offer packets only. Pkt. 15¢.

1107 June Pink—Also known as Pink Earliana

60 days. Fruits are somewhat flattened, weigh 4 to 5 ozs. and have bright deep pink skin and rich pinkish red flesh. The meat is solid and has a delightful sub-acid flavor. It is the earliest pink-skinned tomato, similar to Earliana in all respects except color.

Pkt. 10¢; ½ oz. 40¢; oz. 75¢.

1095 Burpee's Dwarf Giant—Tree type

80 days. Plants are of the dwarf or tree type; fruits are flattened, with rich purple-crimson skin. The meat is fine-grained, juicy, and solid enough to stand shipping well. Desirable home garden variety for those who want to grow large sized tomatoes in a small space.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

Large Orange and Yellow Tomatoes

1111 Burpee's Jubilee 72 days. New and Better Flowers

2439 Petunia, Cheerful

Bronze Medal Winner, All-America Selections for 1944

A brand new color and growing habit distinguishes the new single petunia "Cheerful." The clear salmon-pink flowers, 2¾ in. and more across, have a deeper rose veining toward the throat and here and there among the mass of blooms are ones a tint or two lighter than others. They combine to give a "Cheerful" sparkle and sprightliness. At first the growth is low, spreading close to the ground; later the plants form a dwarf mound 10 in. high with a spread of 2 ft. Growth is densely compact with no tendency whatever to thin out, fall over, or to spread open in the center. Unsurpassed in garden beds and borders. It cuts well, too.

Pkt. 25¢; ¼ oz. \$1.00; ½ oz. \$1.75.

Petunia, Cheerful Pkt. 25¢.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms, sow seed indoors in boxes or pans six weeks before your usual outdoor planting time. Set the plants out in the garden when weather gets warm.

Burpee's Extra Early Asters

In full bloom before others begin to flower

To those who love the delicacy and richness of asters, these extremely early flowering varieties will be a joy. They begin to bloom in about 14 weeks after seed is sown—long before most other asters begin to bud. Extreme earliness and good cutting stems make them a most welcome new type of aster for the home gardener and the florist.

3087 Violet Glory A beautiful double flower, 3 to 3½ in. across, deep purple-violet, with the center incurving petals displaying a handsome silvery sheen. The plant is not very leafy, seeming to give all its strength to the flowers, which are freely borne on stems ranging in length from 12 to 15 in. Plants are of open, spreading habit, 1½ ft. tall and about 2 ft. across. Pkt. 15¢; ½ oz. 50¢; ¼ oz. 85¢.

1603 Navy Blue *Honorable Mention, All-America Selections for 1943.* A new extra-early, giant flowered aster; rather close in form to that of the Giant Crego type. Plants grow about 20 in. tall. Stems are long and wiry, 12 in. and more in length; wonderful for cutting. Makes a grand showing in the garden as plants are extremely free blooming. These six outstanding Burpee Marigolds have foliage without odor and are listed with others of that type on page 64.

2295 Golden West It is earlier blooming, larger flowered, dwarfier growing and more floriferous than Guinea Gold. Flowers are deep orange and grow 3½ in. and more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and are literally covered with carnation-like flowers all summer and fall. Much like Burpee Gold Improved except that Golden West has foliage with the usual marigold odor. Pkt. 15¢; ¼ oz. 35¢; ¼ oz. 60¢.

2180 Guinea Gold Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced and still very popular. Foliage has the usual odor. 2½ ft. Pkt. 10¢; ¼ oz. 30¢; ½ oz. 50¢.

2193 Tetra Flowers have the same attractive carnation-flowered form as Guinea Gold, but are much larger, 3½ to 4 in. across, and of a very deep orange color. 2 to 2½ ft. tall. Start seed indoors for earliest blooms. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra." Pkt. 15¢; ¼ oz. 50¢; ¼ oz. 85¢.

Giant Peony Flowered Marigolds

Plants are upright, quite bushy, 28 in. high; begin blooming in midsummer and continue to flower profusely until frost. 2300 Orange Supreme Perfectly double, intense orange, peony-like flowers on long, strong stems. Plants grow 2½ to 3 ft. high and bloom from early summer until frost; flowers grow 4 to 5 in. across. Striking in garden or cut-flower bouquets. Pkt. 15¢; ¼ oz. 50¢; ¼ oz. 85¢.

2250 Yellow Supreme Lemon-yellow blooms, 4 in. across, with broad, loosely placed, frilled petals that are most exquisite. Pleasing mild honey fragrance. Pkt. 10¢; ¼ oz. 25¢; ¼ oz. 40¢.

2282 "Supreme" Mixed A charming mixture of the above and other shades. Flowers 4 to 5 in. across, with big, frilled petals. Earlier flowering than the original Yellow Supreme. Extra choice for beds, borders and cutting. Pkt. 15¢; ¼ oz. 50¢; ¼ oz. 85¢.

Hedge or Border Marigold

2307 Spanish Gold Every plant is identical in habit, height, breadth, extremely bushy, with a flat top and straight sides so that a row of these plants gives the appearance of a neatly trimmed hedge, 20 in. high and 30 in. wide. When in full bloom, the entire top and sides of the plants are covered with deep glowing golden orange long-stemmed flowers, which grow 3 in. across and somewhat resemble carnations but differ in that the petals are delightfully ruffled and slightly fluted. Comes into bloom rather late; we suggest starting seed indoors for earliest blooms. Pkt. 15¢; ¼ oz. 50¢; ¼ oz. 85¢.

The plants grow from 2½ to 3 ft. tall; some begin to bloom early, some midseason and others late. Unsurpassed where a gay mixture of yellow and orange flowers is desired. **Pkt. 25¢; ½ oz. 70¢; ¼ oz. \$1.25.**

BURPEE'S HYBRID MARIGOLDS

2271 Burpee's Red and Gold Hybrids

Hybrids between African and French Marigolds; some flowers are solid red while others are delightful combinations of red and gold. The color varies with the season—at times it becomes almost pure golden yellow and at other times a bright, rich mahogany-scarlet. Flowers are exceedingly double, 2½ to 3 in. across, nearly three times the size of the largest double French Marigold.

Burpee's Red and Gold Hybrid Marigolds are extremely early; they will come into flower in eight weeks from seed and continue to bear profusely and continuously until frost. The bushy, upright plants grow 1½ ft. tall, 2 ft. wide and are covered with flowers at all times. Especially suited for borders and beds; highly prized for cut flowers. Created on Florida Seed Farms by planting alternate rows of a little French Marigold (male parent) and a big African Marigold (female parent) and putting 600,000 bees in the field to do the cross-pollinating.

Named in

City of Clinton, Iowa,
our Western Headquarters

2365 Mayling—Newest frilled marigold

By permission, named Mayling in honor of Madame Chiang Kai-Shek. A most outstanding Burpee marigold named for a most outstanding woman. Flowers grow 3 in. and more across, the petals being incurved practically their entire length and daintily fringed on the outer edges. This gives a soft, airy, fluffy appearance to the rich, buttery, golden primrose flowers. Plants grow about 2 ft. tall, are very profuse blooming, beginning early in the summer and continue until frost. Foliage is odorless. Stems average 12 to 15 in. in length, making them desirable for cutting. Pkt. 25¢; 1/8 oz. 85¢; 1/4 oz. \$1.50.

2374 Honeycomb—Unique flower form

A Dwarf Double African Marigold that is entirely new. Flowers are somewhat like the chrysanthemum-flowered types, but instead of the florets being curled and interlaced, they are erect-like and so arranged as to resemble a honeycomb in appearance, hence the name. Added to this unique flower form is a color that is rich, deep, sparkling and attractive—a most intense marigold orange. Honeycomb is very early flowering, grows about 14 in. high. Most effective in beds and borders, and although the plants are dwarf, cutting stems of good length may be obtained. The foliage is entirely without the usual marigold odor. Pkt. 25¢; 1/8 oz. 75¢; 1/4 oz. \$1.25.

2364 Oriole—Carnation-like flowers

The flowers are large, 3 1/2 in. across, of a new and sparkling shade of bright golden yellow; carnation-like form, with the petals loose and tilted. Plants grow 2 1/2 ft. tall and freely produce their flowers on long, wiry stems above the odorless foliage. This is a new color in the carnation-flowered group of marigolds with odorless foliage and one that is most desirable for cutting, as well as being showy in beds and borders. Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2294 Burpee Gold Improved

Larger flowered and stronger growing than the original Burpee Gold. The carnation-like flowers grow 3 1/2 to 4 in. across and are of a glorious bright orange color with the long petals loosely arranged. Plants grow 2 1/2 ft. tall; the foliage is entirely free of the usual marigold odor. Pkt. 15¢; 1/8 oz. 35¢; 1/4 oz. 60¢.

New Marigolds with Odorless Foliage

2314 Special Mixture of the collarette, carnation and chrysanthemum-flowered types in all colors from the deepest orange to the lightest yellow; foliage is free of the usual marigold odor. 20 to 30 in. tall. Pkt. (150 seeds) 25¢.

2163 Special Mixture Burpee's Carnation Marigolds with Odorless Foliage

2253 Clinton—Orange carnation-like blooms

Large carnation-flowered, brilliant orange African Marigold with handsomely frilled and waved petals which add so much to its attractiveness. Makes a gorgeous display in the garden; excellent for cutting. Extra long stems and odorless foliage. Blooms from midsummer until frost. 2 1/2 ft. tall. Pkt. 25¢; 1/8 oz. 75¢; 1/4 oz. \$1.25.

2263 Buff Beauty—Frilled carnation-like flowers

Distinct new beauty in color and form. Flowers 3 in. across, with the florets extremely and beautifully ruffled or waved, giving a most delightful frilly appearance; the color is a rich, though soft, buttery golden buff of great appeal. Foliage is entirely odorless; plants grow 20 in. tall and begin to bloom very early in the summer. Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2355 Canary Bird—Striking with orange marigolds

Clear and bright canary-yellow carnation-like flowers, 3 to 3 1/2 in. across, are freely borne on long, strong, stiff stems well above the odorless foliage. Plants grow 2 ft. tall and are very profuse blooming. Flowers are highly prized for cutting and garden display. Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2272 Golden Glow—Rudbeckia-like flowers

Flowers are bright, sharp, golden-yellow and resemble in color and appearance those of the familiar Golden Glow Rudbeckia. In general form, flowers are somewhat like the chrysanthemum-flowered types but petals are straight, sharply pointed and lie rather flat instead of curling and interlacing. Flowers grow about 2 1/2 in. across and are borne in clusters of from 5 to 10 on the ends of heavy branches. Plants are 2 ft. tall; odorless foliage. Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2234 Crown Prince—Improved Collarette

Flowers are of the collarette type, very large, 2 1/2 in. across and nearly as deep, light canary-yellow and freely borne on long, strong stems which makes it excellent for cutting. Plants are vigorous growing, 2 1/2 ft. tall, and the deep green foliage is entirely odorless. Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2199 Crown of Gold—All-America Gold Medal Winner

The first of the famous Burpee's marigolds with odorless foliage; sweetly fragrant collarette flowers of brilliant orange-gold, 2 in. across, are borne early and profusely for a long time on plants 2 ft. tall. Pkt. 10¢; 1/8 oz. 25¢; 1/4 oz. 40¢.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted.

Plant zinnias in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where the plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All are easy to grow.

Burpee's Giant Dahlia Flowered Zinnias

These Zinnias are outstanding both for the exquisite form of their gorgeous, long-stemmed flowers, which greatly resemble Giant Dahlias, and for the marvelous pastel shades included in their range of color. The individual blooms grow about 5 in. across and 2 or more in. in depth. The well-branched, sturdy plants grow 3 ft. high. Showy in the garden; wonderful for cutting.

DAVID BURPEE ZINNIAS

CHRYSANTHEMUM FLOWERED ZINNIAS

2878 Choicest Mixed David Burpee Zinnias are strikingly different; very large, with petals so attractively curled and quilled that the flowers may be likened to large-flowered chrysanthemums. Another outstanding feature of these zinnias is the unusual range of colors, many that have never before been seen in zinnias. Pastel shades predominate, with tones of apricot, soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are combinations of two and three colors. Most desirable for garden use and unsurpassed for cutting. Plants grow 3 ft. tall; leaves are curled and twisted.

BURPEE'S CALENDULAS— SCOTCH OR POT MARIGOLDS

These improved calendulas are far superior to the old-fashioned varieties; flowers are larger, longer stemmed, more fully double and of richer colors. Those offered on this page, except where noted, are extra large-flowered and double to the very center. Calendulas are of easiest culture, succeeding in ordinary, well-drained soil. Where summers are not too hot, plants will bloom from early summer until frost, and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring and again in early summer to furnish blooms in the cool fall days. 15 to 24 in. tall, depending on the variety.

Burpee's Annual Larkspurs

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. We offer your choice of three distinct types.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin them to stand 1 to 1½ ft. apart.

BURPEE'S Fragrant NASTURTIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil. A soil that is overly rich will cause plants to produce more leaves than flowers. They are then most useful plants for dry, sandy, or gravelly locations.

Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance make them most desirable for cutting.

Burpee's Dwarf Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems which makes them especially fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants covered with flowers are most attractive in beds, borders, edgings, rock gardens and pots.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other nasturtium. Nice for cutting. Pkt. 15¢; oz. 50¢; 4 ozs. \$1.50.

2306 Delightful Soft salmon-rose, the upper petals prettily marked crimson-maroon at the base, and, as flowers age, they often take on a deeper shade of salmon-rose. Pkt. 15¢; oz. 45¢; 4 ozs. \$1.25.

2336 Garnet Gem Striking color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. The delightfully sweet-scented flowers are double or semi-double, with 8 to 10 petals, and grow 2½ in. across. Pkt. 15¢; oz. 50¢; 4 ozs. \$1.50.

2329 Golden Globe Exquisite, giant double and semi-double, pure golden yellow fragrant blooms of the same color and shape as Golden Gleam, but the plants are dwarf, globe-shaped and bushy. An *All-America Winner of the Award of Merit*. Pkt. 10¢; oz. 35¢; 4 ozs. \$1.00.

Poppies, Shirley

Papaver rhoeas

Poppies are charming subjects in the garden because of their brilliantly colored flowers and the freedom with which they are produced. They are easy to grow in ordinary soil exposed to the sun; seed should be sown where intended to flower as early in the spring as the soil can be worked. They bloom quickly. Make successive sowings for a continuous display.

For a brilliant display in low borders, edgings, beds, rock gardens, or ground cover, nothing can excel portulaca. Blooms early and continuously until frost; must have a sunny location, but will grow in almost any soil if well drained. Forms a dense, thick carpet; 4 to 6 in. tall. Seed is very fine so should be barely covered when sown.

BURPEE'S SHOWY PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam, such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in the shade nor in soil

that is overly rich. We offer an extra select assortment of varieties, some of which are suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting.

Bedding Petunias (*Petunia hybrida*)

Plants are extremely free blooming, producing a wealth of flowers even under the most trying conditions of weather and soil. Ideal for large beds, borders and porch boxes. Seeds may be sown directly outdoors when soil has become warm or, for earliest blooms, start the seeds indoors in pots or shallow boxes of fine soil. Grow $1\frac{1}{2}$ to 2 ft. tall.

BURPEE'S SNAPDRAGONS

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until

frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions are printed on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Tall Giant Snapdragons (*Antirrhinum maximum*)

Surpass all others for magnificence of flower-spikes. They grow 2 to 3 ft. tall outdoors, the average 10 to 12 in. of which is thickly studded with gorgeous blooms of the largest size. Highly prized for planting in solid beds or borders. Invaluable for cutting. Plants will grow 4 ft. and more tall under glass during the winter, depending on climate, planting dates and growing conditions.

Early Flowering Sweet Peas on next two pages 91

EARLY FLOWERING SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

Many of the Early Flowering Sweet Peas, as well as the Giant Spencers, were introduced by Burpee—famous the world over for Sweet Peas. Year in and year out we work to improve existing varieties and to create new ones. Among the Early Flowering ones recently introduced by us, and which are most outstanding, are those named in honor of, and with the permission of, such famous women as Mrs. Douglas MacArthur, Pearl Buck, Osa Johnson, Ann Batchelder, Helen Hayes, Mrs. August Belmont and Kate Smith.

Double Large Flowered Stocks

Heavy spikes of handsome, fragrant flowers, like small rosettes, are produced in a wide range of soft and distinct shades. Fine for bedding, borders and cutting. For best results, sow seed indoors in shallow boxes or seed pans 6 to 8 weeks before your usual outdoor planting time. Keep in a temperature of 65° F. or less from the time the seed is sown until the plants have made 8 leaves so that they will form buds. When plants are large enough to handle, pot them up singly and grow on in pots until weather and soil have become warm, when they should be transplanted to the garden where they are to remain. You will be pleased with the high percentage of doubles in our strains.

BURPEE'S PERENNIAL FLOWER SEEDS

Perennial Flowers are the hardy permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required.

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Crest (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet No. 26, "Perennials from Seed," will be sent free upon request.

Hardy Garden Lilies

Cultural directions
 given on every bag
 containing the bulbs.

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but much so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly

decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

BURPEE'S DAHLIA ROOTS

Jersey's Beauty
Formal Decorative
Dahlia

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. Cultural directions are sent with every order for Dahlia roots. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; **I. D.** = Informal Decorative;
C. = Cactus; **S. C.** = Semi-Cactus.
